Vision Research

An International Journal for Functional Aspects of Vision

Author and Subject Index
Volume 41, 2001

PERGAMON

Supplement to Vision Research

VISION RESEARCH

Founded by THORNE SHIPLEY

Chairman

H. SPEKREIJSE, Dept. of Visual System Analysis, Academic Medical Center, University of Amsterdam, P.O. Box 12011, 1100 AA Amsterdam, The Netherlands [Tel. (31) 20 5664583; Fax (31) 20 6916521; Email VisionResearch@amc.uva.nl]

Editorial Assitant: SANNE DE VRIES

Vision Research is a journal devoted to the functional aspects of human, vertebrate and invertebrate vision and welcomes papers that address important issues in basic and/or clinical research. The journal is sub-divided into five sections, each with at least two Section Editors for publication of full papers and *Letters-to-the-Editor*. The journal has also a section called Rapid Communications for publication of highly topical material of about 2000 words on a fast publication track (within 3 months upon acceptance).

Section 1: *Neurobiology and Molecular Genetics*
brain imaging
functional morphology and anatomy
pigments and transduction
the role of neurotransmitters
retinal, subcortical and cortical electrophysiology
physiological optics
plasticity and regeneration of function
WOLFGANG BAEHR, Salt Lake City, UT, U.S.A.
SAMUEL WU, Houston, TX, U.S.A.

Section 2: *Psychophysics*
binocular, depth, motion, colour, form, pattern,
orientation and texture vision
spatial vision and stereopsis
attentive vision
adaptation and aftereffects
RANDOLPH BLAKE, Nashville, TN, U.S.A.
ADAM REEVES, Boston, MA, U.S.A.
STEVEN K. SHEVELL, Chicago, IL, U.S.A.

Section 3: *Behavioural Physiology and Visuomotor Control*
animal psychophysics
eye movements and oculomotor studies, reading
visual guidance of manipulation, locomotion and navigation
visual behaviour in space
EILEEN KOWLER, New Brunswick, NJ, U.S.A.
CHRISTA NEUMEYER, Mainz, Germany

Section 4: *Computational Vision*
models and theory
visual networks
ELLEN C. HILDRETH, Wellesley, MA, U.S.A.
DAVID BURR, Pisa, Italy

Section 5: *Clinical Vision Sciences*
psychophysics, electrophysiology
pathophysiology, neuropharmacology
experimental ophthalmology and neurology
functional (brain) imaging
IVAN BODIS-WOLLNER, Brooklyn, NY, U.S.A.
EBERHART ZRENNER, Tübingen, Germany

The Section Editors are assisted by an Editorial Board consisting of:

EMIKO ADACHI-USAMI, Chiba, Japan
MARTIN S. BANKS, Berkeley, CA, U.S.A.
ROBERT BARLOW, Syracuse, NY, U.S.A.
DENNIS DACEY, Seattle, WA, U.S.A.
BARBARA DOSHER, Irvine, CA, U.S.A.
MICHAEL D'ZMURA, Irvine, CA, U.S.A.
CASPER ERKELENS, Utrecht, The Netherlands
MANFRED FAHLE, Bremen, Germany
GERALD FISHMAN, Chicago, IL, U.S.A.
MARK GEORGESON, Birmingham, U.K.
JAN VAN GISBERGEN, Nijmegen, The Netherlands
MARTIN GIZZI, Edison, NJ, U.S.A.
AMIRAM GRINVALD, Rehovot, Israel
WILLEM DE GRIP, Nijmegen, The Netherlands
ROBERT HESS, Montréal, Canada
HOWARD HOWLAND, Ithaca, U.S.A.
DANIEL KERSTEN, Minneapolis, MN, U.S.A.
CHRISTOF KOCH, Pasadena, CA, U.S.A.
BARRY LEE, Göttingen, Germany
GORDON LEGGE, Minneapolis, MN, U.S.A.
SUZANNE P. MCKEE, San Francisco, CA, U.S.A.
JOHN MOLLON, Cambridge, U.K.
DAVID NEWSOME, New Orleans, LA, U.S.A.
CYNTHIA OWSLEY, Birmingham, AL, U.S.A.
ALLAN J. PANTLE, Oxford, OH, U.S.A.
ANDREW J. PARKER, Oxford, U.K.
FRANK SCHAEFFEL, Tübingen, Germany
CLIFF SCHOR, Berkeley, CA, U.S.A.
RUXANDRA SIRETEANU, Frankfurt, Germany
ROGER TOOTELL, Charlestown, MA, U.S.A.
CHRISTOPHER TYLER, San Francisco, CA, U.S.A.
DAN TSO, New York, NY, U.S.A.
DAVID WHITAKER, West Yorkshire, U.K.
HUGH WILSON, Toronto, Ontario, Canada

Author enquiries

For enquiries relating to the submission of articles (including electronic submission), the status of accepted articles through our Online Article Status Information System (OASIS), author Frequently Asked Questions and any other enquiries relating to Elsevier Science, please consult http://www.elsevier.com/locate/authors/

For specific enquiries on the preparation of electronic artwork, consult http:/www.elsevier.com/locate/authorartwork/

Contact details for questions arising after acceptance of an article, especially those relating to proofs, are provided when an article is accepted for publication.

Frequency: Published 28 issues/annum. © 2002 Elsevier Science Ltd. All rights reserved.

Publication information: Vision Research (ISSN 0042-6989). For 2002, Volume 42 is scheduled for publication. Subscription prices are available upon request from the Publisher or from the Regional Sales Office nearest you or from this journal's website (http://www.elsevier.com/locate/visres). Further information is avialable on this journal and other Elsevier Science products through Elsevier's website: (http://www.elsevier.com). Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by standard mail (surface within Europe, air delivery outside Europe). Priority rates are available upon request. Claims for missing issues should be made within six months of the date of dispatch.

Orders, claims, and product enquiries: Please contact the Customer Support Department at the Regional Sales Office nearest you:
New York: Elsevier Science, PO Box 945, New York, NY 10159-0945, USA; phone: (+1) (212) 633 3730 [toll free number for North American customers: 1-888-4ES-INFO (437-4636)]; fax: (+1) (212) 633 3680; e-mail: usinfo-f@elsevier.com. **Amsterdam:** Elsevier Science, PO Box 211, 1000 AE Amsterdam, The Netherlands; phone: (+31) 20 4853757; fax: (+31) 20 4853432; e-mail: nlinfo-f@elsevier.nl. **Tokyo:** Elsevier Science, 9-15 Higashi-Azabu 1-chome, Minato-ku, Tokyo 106-0044, Japan; phone: (+81) (3) 5561 5033; fax: (+81) (3) 5561 5047; e-mail: info@elsevier.co.jp. **Singapore:** Elsevier Science, No.1 Temasek Avenue, # 17-01 Millenia Tower, Singapore 039192; phone: (+65) 434 3727; fax: (+65) 337 2230; e-mail: asiainfo@elsevier.com.sg. **Rio de Janeiro:** Elsevier Science, Rua Sete de Setembro 111/16 Andar, 20050-002 Centro, Rio de Janeiro-RJ, Brazil; phone: (+55) (21) 509 5340; fax: (+55) (21) 507 1991; e-mail: elsevier@campus.com.br [Note (Latin America): for orders, claims and help desk information, please contact the Regional Sales Office in New York as listed above].
USA mailing notice: Vision Research (ISSN 0042-6989) is published 28 issues/annum, semi-monthly with additional issues in March, June–September and December, in one Volume by Elsevier Science Ltd (P.O. Box 211, 1000 AE Amsterdam, The Netherlands). Annual subscription price in the USA US$ 2839.00 (valid in North, Central and South America), including air speed delivery. Periodical postage rate paid at Jamaica, NY 11431.
USA POSTMASTER: Send address changes to: Vision Research, Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003.
AIRFREIGHT AND MAILING in the USA by Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003.

SUBJECT INDEX

ABERRATION
The spherical aberration of the crystalline lens of the human eye 41: 235
The development of the crystalline lens is sensitive to visual input in the African cichlid fish, *Haplochromis burtoni* 41: 549
Clinical suppression in monkeys reared with abnormal binocular visual experience 41: 1593
A longitudinal study of the biometric and refractive changes in full-term infants during the first year of life 41: 2799
Investigating sources of variability of monochromatic and transverse chromatic aberrations across eyes 41: 3861

ABSOLUTE THRESHOLD. *see* DETECTION THRESHOLD

ACCOMMODATION
Closed-loop and open-loop accommodative vergence eye movements 41: 77
Dynamics of the accommodation response to abrupt changes in target vergence as a function of age 41: 507
Isolated short-wavelength sensitive cones can mediate a reflex accommodation response 41: 911
Fixation disparity and accommodation for stimuli closer and more distant than oculomotor tonic positions 41: 923
The influence of tinted lenses upon ocular accommodation 41: 1229
Refractive state and accommodation in the eyes of free-swimming *versus* restrained juvenile lemon sharks *(Negaprion brevirostris)* 41: 1885
On modeling the causes of presbyopia 41: 3083 (letter)
The ageing lens 41: 3089 (letter)
Emmetropization in chicks uses optical vergence and relative distance cues to decode defocus 41: 3197

ACUITY (*see also* HYPERACUITY; STEREOPSIS)
Is peripheral visual acuity susceptible to perceptual learning in the adult? 41: 47
Evaluation of the NEI visual functioning questionnaire as an interval measure of visual ability in low vision 41: 397
Conditions of perceptual selection and suppression during interocular rivalry in strabismic and normal cats 41: 771
Dual oriented mechanisms in contour interaction 41: 853
Configuration specificity in bisection acuity 41: 1133
Coherence of early motion signals 41: 1631
The relatively small decline in orientation acuity as stimulus size decreases 41: 1723
Binocular summation for grating detection and resolution in foveal and peripheral vision 41: 3093
Can the amplitude difference spectrum peak frequency explain the foveal crowding effect? 41: 3693

ADAPTATION
The effect of orientation learning on contrast sensitivity 41: 463
Adaptation to disparity but not to perceived depth 41: 883

PII: S0042-6989(02)00070-6

The time course of the lower threshold of motion during rapid events of adaptation 41: 1139
Imaging visual function with the multifocal m-sequence technique 41: 1241
Target/surround asymmetry in perceptual filling-in 41: 2065
Filling-in the details on perceptual fading 41: 2107
Visual aftereffects of sequential perception: dynamic adaptation to changes in texture density and contrast 41: 2607
Texture contrast aftereffects are monocular; texture density aftereffects are binocular 41: 2619
Texture fading correlates with stimulus salience 41: 2969
The size-tuning of the face-distortion after-effect 41: 2979
Eye position sense contributes to the judgement of slant 41: 3447
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883

ADAPTATION, DARK
Unilateral light–dark transitions affect choroidal blood flow in both eyes 41: 2919

ADAPTATION, LIGHT
Infant light adaptation shows Weber's law at photopic illuminances 41: 359
Comparing increment and decrement probes in the probed-sinewave paradigm 41: 1119
Information theoretical evaluation of parametric models of gain control in blowfly photoreceptor cells 41: 1851
Multiple processes mediate flicker sensitivity 41: 2449
Unilateral light–dark transitions affect choroidal blood flow in both eyes 41: 2919
Outdoor performance of a motion-sensitive neuron in the blowfly 41: 3627

ADAPTATION, MOTION
Visual jitter: evidence for visual-motion-based compensation of retinal slip due to small eye movements 41: 173
A motion aftereffect seen more strongly by the non-adapted eye: evidence of multistage adaptation in visual motion processing 41: 561
The stereoscopic (cyclopean) motion aftereffect is dependent upon the temporal frequency of adapting motion 41: 1809
Increased sensitivity to speed changes during adaptation to first-order, but not to second-order motion 41: 1825
Directional tuning of human motion adaptation as reflected by the motion VEP 41: 2187

ADAPTATION, OCULOMOTOR
Adaptation of torsional eye alignment in relation to smooth pursuit and saccades 41: 3735

ADAPTATION, SPATIAL
Orthogonal adaptation improves orientation discrimination 41: 151

AFTEREFFECTS (*see also* ILLUSION)
Orthogonal adaptation improves orientation discrimination 41: 151
Perceived motion in orientational afterimages: direction and speed 41: 161
A motion aftereffect seen more strongly by the non-adapted eye: evidence of multistage adaptation in visual motion processing 41: 561

Differential effect of attention to translation and expansion on motion aftereffects (MAE) 41: 1107
The stereoscopic (cyclopean) motion aftereffect is dependent upon the temporal frequency of adapting motion 41: 1809
Increased sensitivity to speed changes during adaptation to first-order, but not to second-order motion 41: 1825
Visual aftereffects of sequential perception: dynamic adaptation to changes in texture density and contrast 41: 2607
Texture contrast aftereffects are monocular; texture density aftereffects are binocular 41: 2619
3D after-effects are due to shape and not disparity adaptation 41: 2733
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883

AFTERIMAGES. *see* AFTEREFFECTS

AGING
Variation of chromatic sensitivity across the life span 41: 23
Dynamics of the accommodation response to abrupt changes in target vergence as a function of age 41: 507
The shape of the aging human lens: curvature, equivalent refractive index and the lens paradox 41: 1867
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779
On modeling the causes of presbyopia 41: 3083 (letter)
The ageing lens 41: 3089 (letter)

ALIGNMENT. *see* HYPERACUITY

AMACRINE CELLS
On-bipolar cells and depolarising third-order neurons as the origin of the ERG-b-wave in the RCS rat 41: 1091

AMBLYOPIA
Clinical suppression in monkeys reared with abnormal binocular visual experience 41: 1593
Contour interaction in amblyopia: scale selection 41: 2285
Is second-order spatial loss in amblyopia explained by the loss of first-order spatial input? 41: 2951

ANATOMY. *see* NEUROANATOMY; OCULOMOTOR ANATOMY

ANTIBODIES. *see* IMMUNOCHEMISTRY

APPARENT MOTION. *see* MOTION PERCEPTION, APPARENT MOTION

ATTENTION
Stimulus probability directs spatial attention: an enhancement of sensitivity in humans and monkeys 41: 57
Uncertainty, attentional capacity and chromatic mechanisms in visual search 41: 313
Perceptual grouping via spatial selection in a focused-attention task 41: 611
Modulation of spatial attention with unidirectional field motion: an implication for the shift of the OKN beating field 41: 801
Differential effect of attention to translation and expansion on motion aftereffects (MAE) 41: 1107
Event-related brain potentials during selective attention to depth and form in global stereopsis 41: 1379
Integrating electrophysiology and neuroimaging of spatial selective attention to simple isolated visual stimuli 41: 1423
Putting spatial attention on the map: timing and localization of stimulus selection processes in striate and extrastriate visual areas 41: 1437
Effect of size of attended area on contrast sensitivity function 41: 1483
Effects of set-size and selective spatial attention on motion processing 41: 1501
Attention induced motion blindness 41: 1613
Attentional shifts between surfaces: effects on detection and early brain potentials 41: 1619
Size-based selection in rapid serial visual presentation 41: 2221
Automatic gain control contrast mechanisms are modulated by attention in humans: evidence from visual evoked potentials 41: 2435
The spatial profile of visual attention in mental curve tracing 41: 2569
Evidence from a line bisection task for visuospatial neglect in Left Hemiparkinson's disease 41: 2677
Ocular oscillations on eccentric gaze 41: 2895
Apparent size of an object remains uncompressed during presaccadic compression of visual space 41: 3039
Visual search in migraine and visual discomfort groups 41: 3063
Can contrast sensitivity functions in dyslexia be explained by inattention rather than a magnocellular deficit? 41: 3205
Short-latency ocular following in humans: sensitivity to binocular disparity 41: 3371
Systematic eye movements do not account for the perception of motion during attentive tracking 41: 3505
What controls attention in natural environments? 41: 3535
Visual scene memory and the guidance of saccadic eye movements 41: 3597
Eye movements during visual search: the costs of choosing the optimal path 41: 3613
Flanker effects in peripheral contrast discrimination—psychophysics and modeling 41: 3663
Eye movements and familiarity effects in visual search 41: 3763
Set-size and chromatic uncertainty in an accuracy visual search task 41: 3817
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883

BINOCULAR RIVALRY
Interocular interactions reveal the opponent structure of motion mechanisms 41: 441
Conditions of perceptual selection and suppression during interocular rivalry in strabismic and normal cats 41: 771
Filling-in at the natural blind spot contributes to binocular rivalry 41: 835
A transition between eye and object rivalry determined by stimulus coherence 41: 981
Controlling binocular rivalry 41: 2943
Motion rivalry impairs motion repulsion 41: 3639

BINOCULAR VISION
Strength of depth effects induced by three types of vertical disparity 41: 37
Effects of disparity-perspective cue conflict on depth contrast 41: 415
Relative roles of 3-D and 2-D coordinate systems in solving the correspondence problem in apparent motion 41: 759
A binocular site for contrast-modulated masking 41: 873
Adaptation to disparity but not to perceived depth 41: 883
Fixation disparity and accommodation for stimuli closer and more distant than oculomotor tonic positions 41: 923
Ocular dominance reverses as a function of horizontal gaze angle 41: 1743
The stereoscopic (cyclopean) motion aftereffect is dependent upon the temporal frequency of adapting motion 41: 1809
The relative sensitivities of sensory and motor fusion to small binocular disparities 41: 1969
Gecko vision–retinal organization, foveae and implications for binocular vision 41: 2043
Are corresponding points fixed? 41: 2457
Detecting changes of spatial cone-excitation ratios in dichoptic viewing 41: 2601
Stereoacuity thresholds in the presence of a reference surface 41: 3051
Direction of heading and vestibular control of binocular eye movements 41: 3215
Saccadic binocular coordination in alternating exotropia 41: 3425
How vertical disparities assist judgements of distance 41: 3455
Organisation of signals involved in binocular perception and vergence control 41: 3497
Detecting changes of spatial cone-excitation ratios in dichoptic viewing 41: 3783 (erratum)

BIPOLAR CELLS
On-bipolar cells and depolarising third-order neurons as the origin of the ERG-b-wave in the RCS rat 41: 1091
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779

BRIGHTNESS PERCEPTION
Building surfaces from borders in Areas 17 and 18 of the cat 41: 1389
A multiscale spatial filtering account of the Wertheimer–Benary effect and the corrugated Mondrian 41: 2487
Perception viewed as an inverse problem 41: 3145 (mini–review)
Darkness filling-in: a neural model of darkness induction 41: 3649

BROCA-SULZER EFFECT. *see* BRIGHTNESS PERCEPTION

CHANNELS
Energy model for contrast detection: spatial-frequency and orientation selectivity in grating summation 41: 1547

CHROMATIC ABERRATION. *see* ABERRATION

CHROMATIC CONTRAST. *see* COLOR CONTRAST

CHROMATIC INDUCTION. *see* COLOR CONTRAST

CLINICAL APPLICATIONS
Evaluation of the NEI visual functioning questionnaire as an interval measure of visual ability in low vision 41: 397
Characterization and use of a digital light projector for vision research 41: 427
Psychophysics of reading: XX. Linking letter recognition to reading speed in central and peripheral vision 41: 725
Multifocal pupillary light response fields in normal subjects and patients with visual field defects 41: 1073
The effect of reading and near-work on the development of myopia in emmetropic boys: a prospective, controlled, three-year follow-up study 41: 2511

COGNITION
Compression of space in visual memory 41: 329
The persistence of position 41: 529
A model of eye movements and visual working memory during problem solving in geometry 41: 1561
A model of visual-spatial memory across saccades 41: 1575
Different effects of lorazepam and diazepam on perceptual integration 41: 2297
Reference frames in reading: evidence from visually and memory-guided saccades 41: 3547
Visual scene memory and the guidance of saccadic eye movements 41: 3597

COLOR ANOMALY
Chromatic and achromatic defects in patients with progressing glaucoma 41: 1215

COLOR APPEARANCE
Colour constancy from temporal cues: better matches with less variability under fast illuminant changes 41: 285
The consequences of opponent rectification: the effect of surround size and luminance on color appearance 41: 859

Nonlocal interactions in color perception: nonlinear processing of chromatic signals from remote inducers 41: 1535
Unique hues: an old problem for a new generation 41: 1645
Two competing mechanisms underlying neon color spreading, visual phantoms and grating induction 41: 2347
Illuminant cues in surface color perception: tests of three candidate cues 41: 2581
Detecting changes of spatial cone-excitation ratios in dichoptic viewing 41: 2601
Unique hues: an old problem for a new generation 41: 2811 (corrigendum)
Colour, form, and movement are not perceived simultaneously 41: 2909
Perception viewed as an inverse problem 41: 3145 (mini–review)
Detecting changes of spatial cone-excitation ratios in dichoptic viewing 41: 3783 (erratum)

COLOR CODING
Assumptions concerning orthogonality in threshold-scaled *versus* cone-contrast colour spaces (letter) 41: 53
Lights and neural responses do not depend on choice of color space (letter) 41: 1683

COLOR CONTRAST
Variation of chromatic sensitivity across the life span 41: 23
The role of chromatic contrast and luminance polarity in stereoscopic segmentation 41: 375
The consequences of opponent rectification: the effect of surround size and luminance on color appearance 41: 859
The role of spatial frequency in color induction 41: 1007
Dependency of reaction times to motion onset on luminance and chromatic contrast 41: 1039
Nonlocal interactions in color perception: nonlinear processing of chromatic signals from remote inducers 41: 1535
Luminance and chromatic cues in a spatial integration task 41: 3705

COLOR DISCRIMINATION
Study of colour discrimination with comb-filtered spectra 41: 541
Colour thresholds and receptor noise: behavior and physiology compared 41: 639
Chromatic detection and discrimination analyzed by a Bayesian classifier 41: 893
Development of psychophysically-derived detection contours in L- and M-cone contrast space 41: 1791
Sensitivity to modulation of color distribution in multicolored textures 41: 2475
Set-size and chromatic uncertainty in an accuracy visual search task 41: 3817
Responding to feature or location: a re-examination of inhibition of return and facilitation of return 41: 3903

COLOR OPPONENCY
Assumptions concerning orthogonality in threshold-scaled *versus* cone-contrast colour spaces (letter) 41: 53
Red-green and blue-yellow mechanisms are matched in sensitivity for temporal and spatial modulation 41: 245
Unique hues: an old problem for a new generation 41: 1645
Lights and neural responses do not depend on choice of color space (letter) 41: 1683
Unique hues: an old problem for a new generation 41: 2811 (corrigendum)

CONES
Retinal photoreceptors of paleognathous birds: the ostrich *(Struthio camelus)* and rhea *(Rhea americana)* 41: 1
Isolated short-wavelength sensitive cones can mediate a reflex accommodation response 41: 911
Packing arrangement of the three cone classes in primate retina 41: 1291
Ionochromic properties of long-wave-sensitive cones in the goldfish retina: an electrophysiological and microspectrophotometric study 41: 1755
Ultraviolet and middle wavelength sensitive cone responses in the electroretinogram (ERG) of normal and *Rpe*65 –/– mice 41: 2425
Multiple processes mediate flicker sensitivity 41: 2449
Detecting changes of spatial cone-excitation ratios in dichoptic viewing 41: 2601
Identifying UV-cone responses in the murine superior colliculus 41: 2819
Gradual and partial loss of corner cone-occupied area in the retina of rainbow trout 41: 3073
Detecting changes of spatial cone-excitation ratios in dichoptic viewing 41: 3783 (erratum)

CONTEXTUAL MODULATION. *see* LATERAL INTERACTIONS

CONTOUR PERCEPTION
Orientation processing mechanisms revealed by the plaid tilt illusion 41: 483
Role of motion integration in contour perception 41: 705
Edge co-occurrence in natural images predicts contour grouping performance 41: 711
Dual oriented mechanisms in contour interaction 41: 853
Dynamics of contour integration 41: 1023
Neural synergy in visual grouping: when good continuation meets common fate 41: 2057
Different effects of lorazepam and diazepam on perceptual integration 41: 2297
The spatial profile of visual attention in mental curve tracing 41: 2569
Surface color from boundaries: a new 'watercolor' illusion 41: 2669
Cue interactions, border ownership and illusory contours 41: 2827
Snakes and ladders: the role of temporal modulation in visual contour integration 41: 3775
Visual summation of luminance lines and illusory contours induced by pictorial, motion, and disparity cues 41: 3805
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883

CONTRAST DISCRIMINATION
Interocular interactions reveal the opponent structure of motion mechanisms 41: 441
Contrast discrimination deficits in retinitis pigmentosa are greater for stimuli that favor the magnocellular pathway 41: 671
Energy model for contrast detection: spatial-frequency and orientation selectivity in grating summation 41: 1547
Pulse and steady-pedestal contrast discrimination: effect of spatial parameters 41: 2079
Discriminating contrast discontinuities: asymmetries, dipper functions, and perceptual learning 41: 3009
Flanker effects in peripheral contrast discrimination—psychophysics and modeling 41: 3663

CONTRAST FLASH. *see* MASKING

CONTRAST PERCEPTION
Measurement and modeling of center-surround suppression and enhancement 41: 571
Response characteristics of the normal retino-cortical pathways as determined with simultaneous recordings of pattern visual evoked potentials and simple motor reaction times 41: 1085
Coherence of early motion signals 41: 1631
An inverse oblique effect in human vision 41: 1749
Contrast gain mechanism or transient channel? Why the effects of a background pattern alter over time 41: 1879
Visual aftereffects of sequential perception: dynamic adaptation to changes in texture density and contrast 41: 2607
Texture contrast aftereffects are monocular; texture density aftereffects are binocular 41: 2619

CONTRAST SENSITIVITY
Infant light adaptation shows Weber's law at photopic illuminances 41: 359
The effect of orientation learning on contrast sensitivity 41: 463
Identification of facial images in peripheral vision 41: 599
Contrast discrimination deficits in retinitis pigmentosa are greater for stimuli that favor the magnocellular pathway 41: 671
The time course of the lower threshold of motion during rapid events of adaptation 41: 1139
Effect of size of attended area on contrast sensitivity function 41: 1483
Spatial neural modulation transfer function of human foveal visual system for equiluminous chromatic gratings 41: 1659
The paracentral visual field in multiple sclerosis: evidence for a deficit in interneuronal spatial summation? 41: 1735
Effect of stimulus contrast on performance and eye movements in visual search 41: 1817
Spatial-frequency and contrast properties of crowding 41: 1833
Temporal integration of optic flow, measured by contrast and coherence thresholds 41: 1891
Filling-in the details on perceptual fading 41: 2107
Controlling binocular rivalry 41: 2943
Texture fading correlates with stimulus salience 41: 2969
Can contrast sensitivity functions in dyslexia be explained by inattention rather than a magnocellular deficit? 41: 3205

CORNEA
The spherical aberration of the crystalline lens of the human eye 41: 235
Measurement of corneal sublayer thickness and transparency in transgenic mice with altered corneal clarity using in vivo confocal microscopy 41: 1283
Evaluation of different recording parameters to establish a standard for flash electroretinography in rodents 41: 2173
Investigating sources of variability of monochromatic and transverse chromatic aberrations across eyes 41: 3861

CORTEX
Simultaneous near-infrared spectroscopy monitoring of left and right occipital areas reveals contra-lateral hemodynamic changes upon hemi-field paradigm 41: 97
Opsoclonus-induced occipital deactivation with a region-specific distribution 41: 1209
Functional brain imaging based on ERD/ERS 41: 1257
High-resolution spatio-temporal mapping of visual pathways using multi-electrode arrays 41: 1261
Resolution, separation of retinal ganglion cells, and cortical magnification in humans 41: 1313
Visual areas and spatial summation in human visual cortex 41: 1321
A hierarchy of the functional organization for color, form and disparity in primate visual area V2 41: 1333
Functional organisation of the saccadic reference system processing extraretinal signals in humans 41: 1351
Mapping visual cortex in monkeys and humans using surface-based atlases 41: 1359
Building surfaces from borders in Areas 17 and 18 of the cat 41: 1389
The lateral occipital complex and its role in object recognition 41: 1409
Integrating electrophysiology and neuroimaging of spatial selective attention to simple isolated visual stimuli 41: 1423
Putting spatial attention on the map: timing and localization of stimulus selection processes in striate and extrastriate visual areas 41: 1437
Sustained extrastriate cortical activation without visual awareness revealed by fMRI studies of hemianopic patients 41: 1459
A model of visual-spatial memory across saccades 41: 1575
Directional tuning of human motion adaptation as reflected by the motion VEP 41: 2187
A two-layer sparse coding model learns simple and complex cell receptive fields and topography from natural images 41: 2413
Cortical and subcortical contributions to coordinated eye and head movements 41: 3295
Signal transformations from cerebral cortex to superior colliculus for the generation of saccades 41: 3399
Function of center-surround antagonism for motion in visual area MT/V5: a modeling study 41: 3917

CORTICAL MAGNIFICATION
Resolution, separation of retinal ganglion cells, and cortical magnification in humans 41: 1313
Visual areas and spatial summation in human visual cortex 41: 1321

CURVATURE
Dynamics of contour integration 41: 1023
Information limitations in perception of shape from texture 41: 1519
3D after-effects are due to shape and not disparity adaptation 41: 2733
Information limitations in perception of shape from texture 41: 2925 (publisher's note), 41: 2927 (erratum)
First-order structure induces the 3-D curvature contrast effect 41: 3829

DEPTH PERCEPTION
Strength of depth effects induced by three types of vertical disparity 41: 37
Effects of disparity-perspective cue conflict on depth contrast 41: 415

Experience-dependent visual cue integration based on consistencies between visual and haptic percepts 41: 449
Relative roles of 3-D and 2-D coordinate systems in solving the correspondence problem in apparent motion 41: 759
Adaptation to disparity but not to perceived depth 41: 883
Event-related brain potentials during selective attention to depth and form in global stereopsis 41: 1379
Lines and dots: characteristics of the motion integration process 41: 2207
Stereoprocessing of cyclopean depth images: horizontally elongated summation fields 41: 2235
Interaction of visual prior constraints 41: 2653
3D after-effects are due to shape and not disparity adaptation 41: 2733
Depth thresholds of motion parallax as a function of head movement velocity 41: 2835
Stereoacuity thresholds in the presence of a reference surface 41: 3051
Effects of horizontal and vertical additive disparity noise on stereoscopic corrugation detection 41: 3133
How vertical disparities assist judgements of distance 41: 3455
Organisation of signals involved in binocular perception and vergence control 41: 3497
First-order structure induces the 3-D curvature contrast effect 41: 3829
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873

DETECTION THRESHOLD
Different populations of neurons contribute to the detection and discrimination of visual motion 41: 685
Chromatic detection and discrimination analyzed by a Bayesian classifier 41: 893
An inverse oblique effect in human vision 41: 1749
Development of psychophysically-derived detection contours in L- and M-cone contrast space 41: 1791
Detection thresholds for spiral Glass patterns 41: 3785

DEVELOPMENT
Variation of chromatic sensitivity across the life span 41: 23
Directional motion asymmetry in infant VEPs — which direction? 41: 201
Overnight lens removal avoids changes in refraction and eye growth produced by plano soft contact lenses in infant marmosets 41: 257
Compensatory changes in eye growth and refraction induced by daily wear of soft contact lenses in young marmosets 41: 267
Infant light adaptation shows Weber's law at photopic illuminances 41: 359
The development of the crystalline lens is sensitive to visual input in the African cichlid fish, *Haplochromis burtoni* 41: 549
Infant direction discrimination thresholds 41: 1049
Development of psychophysically-derived detection contours in L- and M-cone contrast space 41: 1791
A longitudinal study of the biometric and refractive changes in full-term infants during the first year of life 41: 2799
Gradual and partial loss of corner cone-occupied area in the retina of rainbow trout 41: 3073
Emmetropization in chicks uses optical vergence and relative distance cues to decode defocus 41: 3197

DICHROMACY
Filling-in of the foveal blue scotoma 41: 2961

DIPLOPIA. *see* BINOCULAR VISION

DIRECTIONAL SENSITIVITY (MOTION). *see* MOTION PERCEPTION, DIRECTIONAL SENSITIVITY

DISPARITY. *see* BINOCULAR VISION; STEREOPSIS

ECCENTRICITY. *see* PERIPHERAL VISION

ELECTRORETINOGRAM
Immunocytochemical and electrophysiological characterization of GABA receptors in the frog and turtle retina 41: 691
On-bipolar cells and depolarising third-order neurons as the origin of the ERG-b-wave in the RCS rat 41: 1091
Imaging visual function with the multifocal m-sequence technique 41: 1241
Ionochromic properties of long-wave-sensitive cones in the goldfish retina: an electrophysiological and microspectrophotometric study 41: 1755
The optic nerve head component of the monkey's *(Macaca mulatta)* multifocal electroretinogram (mERG) 41: 2029
Evaluation of different recording parameters to establish a standard for flash electroretinography in rodents 41: 2173
Ultraviolet and middle wavelength sensitive cone responses in the electroretinogram (ERG) of normal and *Rpe*65 –/– mice 41: 2425
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779
Analysis of photoreceptor function and inner retinal activity in juvenile X-linked retinoschisis 41: 3931

EMMETROPIZATION
Overnight lens removal avoids changes in refraction and eye growth produced by plano soft contact lenses in infant marmosets 41: 257
Compensatory changes in eye growth and refraction induced by daily wear of soft contact lenses in young marmosets 41: 267
The effect of reading and near-work on the development of myopia in emmetropic boys: a prospective, controlled, three-year follow-up study 41: 2511
A longitudinal study of the biometric and refractive changes in full-term infants during the first year of life 41: 2799
Emmetropization in chicks uses optical vergence and relative distance cues to decode defocus 41: 3197

EVOKED POTENTIALS
Directional motion asymmetry in infant VEPs — which direction? 41: 201
Response characteristics of the normal retino-cortical pathways as determined with simultaneous recordings of pattern visual evoked potentials and simple motor reaction times 41: 1085
Functional brain imaging based on ERD/ERS 41: 1257
Event-related brain potentials during selective attention to depth and form in global stereopsis 41: 1379
Integrating electrophysiology and neuroimaging of spatial selective attention to simple isolated visual stimuli 41: 1423
Putting spatial attention on the map: timing and localization of stimulus selection processes in striate and extrastriate visual areas 41: 1437
Attentional shifts between surfaces: effects on detection and early brain potentials 41: 1619
Visual evoked potentials elicited by chromatic motion onset 41: 2005
Directional tuning of human motion adaptation as reflected by the motion VEP 41: 2187
Automatic gain control contrast mechanisms are modulated by attention in humans: evidence from visual evoked potentials 41: 2435
Identifying UV-cone responses in the murine superior colliculus 41: 2819
A VEP study on visual processing of figural geometry 41: 3791

EYE-MOVEMENTS
Visual jitter: evidence for visual-motion-based compensation of retinal slip due to small eye movements 41: 173
Ocular oscillations on eccentric gaze 41: 2895
Cortical and subcortical contributions to coordinated eye and head movements 41: 3295
Hitting what one wants to hit and missing what one wants to miss 41: 3321
Systematic eye movements do not account for the perception of motion during attentive tracking 41: 3505
In what ways do eye movements contribute to everyday activities? 41: 3559
Eye movements and familiarity effects in visual search 41: 3763

EYE-MOVEMENTS, OPTOKINETIC
Directional motion asymmetry in infant VEPs — which direction? 41: 201
Conditions of perceptual selection and suppression during interocular rivalry in strabismic and normal cats 41: 771
Modulation of spatial attention with unidirectional field motion: an implication for the shift of the OKN beating field 41: 801
The visual consequences of deviations in the orientation of the axis of rotation of the human vestibulo-ocular reflex 41: 3271
Short-latency ocular following in humans: sensitivity to binocular disparity 41: 3371
Directional effect of inactivation of the nucleus of the optic tract on optokinetic nystagmus in the cat 41: 3389

EYE-MOVEMENTS, SACCADIC
Saccade target selection in visual search: the effect of information from the previous fixation 41: 87
The attenuation of perceived image smear during saccades 41: 521
Disconjugate oculomotor learning caused by feeble image-size inequality: differences between secondary and tertiary positions 41: 625
Short-term priming, concurrent processing, and saccade curvature during a target selection task in the monkey 41: 785

Perception of relation of stimuli locations successively flashed before saccade 41: 935
Eye movement control in reading: word predictability has little influence on initial landing positions in words 41: 943
Express saccades: is bimodality a result of the order of stimulus presentation? 41: 1145
Opsoclonus-induced occipital deactivation with a region-specific distribution 41: 1209
Functional organisation of the saccadic reference system processing extraretinal signals in humans 41: 1351
A model of eye movements and visual working memory during problem solving in geometry 41: 1561
A model of visual-spatial memory across saccades 41: 1575
The joint contributions of saccades and ocular drift to repeated ocular fixations 41: 1709
Effect of stimulus contrast on performance and eye movements in visual search 41: 1817
Countermanding saccades with auditory stop signals: testing the race model 41: 1951
The premotor region essential for rapid vertical eye movements shows early involvement in Alzheimer's disease-related cytoskeletal pathology 41: 2149
Chameleon eye position obeys Listing's law 41: 2245
Saccades to remembered targets exhibit enhanced orbital position effects in monkeys 41: 2393
Saccades guided by somatosensory stimuli 41: 2407
Eye movement control in reading unspaced text: the case of the Japanese script 41: 2503
Afferent delays and the mislocalization of perisaccadic stimuli 41: 2631
Saccadic countermanding: a comparison of central and peripheral stop signals 41: 2645
Peripheral and parafoveal cueing and masking effects on saccadic selectivity in a gaze-contingent window paradigm 41: 2757
Apparent size of an object remains uncompressed during presaccadic compression of visual space 41: 3039
Experimental control of eye and head positions prior to head-unrestrained gaze shifts in monkey 41: 3243
Early head movements elicited by visual stimuli or collicular electrical stimulation in the cat 41: 3283
Temporal coordination of the human head and eye during a natural sequential tapping task 41: 3307
The omnipresent prolongation of visual fixations: saccades are inhibited by changes in situation and in subject's activity 41: 3345
Signal transformations from cerebral cortex to superior colliculus for the generation of saccades 41: 3399
Interocular timing differences in the horizontal components of human saccades 41: 3413
Saccadic binocular coordination in alternating exotropia 41: 3425
Saccadic choice with asynchronous targets: evidence for independent randomisation 41: 3437
Visual search in depth 41: 3487
Fixation location effects on fixation durations during reading: an inverted optimal viewing position effect 41: 3513
What controls attention in natural environments? 41: 3535
Reference frames in reading: evidence from visually and memory-guided saccades 41: 3547
Eye movements during reading: a theory of saccade initiation times 41: 3567
Oculomotor behavior and perceptual strategies in complex tasks 41: 3587
Visual scene memory and the guidance of saccadic eye movements 41: 3597
Eye movements during visual search: the costs of choosing the optimal path 41: 3613
Adaptation of torsional eye alignment in relation to smooth pursuit and saccades 41: 3735
Non-veridical visual motion perception immediately after saccades 41: 3751

The influence of bright background flicker during different saccade periods on saccadic performance 41: 3909

EYE-MOVEMENTS, SMOOTH PURSUIT
Nonlinear contribution of eye velocity to motion perception 41: 385
The role of target position in smooth pursuit deceleration and termination 41: 655
Cancellation of self-induced retinal image motion during smooth pursuit eye movements 41: 1685
Smooth eye movements and spatial localisation 41: 2253
Pursuit affects precision of perceived heading for small viewing apertures 41: 2375
Transducer models of head-centred motion perception 41: 2741
Adaptive control of pursuit, vergence and eye torsion in humans: basic and clinical implications 41: 3331
Heading and path percepts from visual flow and eye pursuit signals 41: 3467
Adaptation of torsional eye alignment in relation to smooth pursuit and saccades 41: 3735

EYE-MOVEMENTS, TORSIONAL
Effect of light sleep on three-dimensional eye position in static roll and pitch 41: 495
Three-dimensional eye position during static roll and pitch in humans 41: 2127
Adaptive control of pursuit, vergence and eye torsion in humans: basic and clinical implications 41: 3331
Adaptation of torsional eye alignment in relation to smooth pursuit and saccades 41: 3735

EYE-MOVEMENTS, VERGENCE
Closed-loop and open-loop accommodative vergence eye movements 41: 77
Fixation disparity and accommodation for stimuli closer and more distant than oculomotor tonic positions 41: 923
Envelope size-tuning for transient disparity vergence 41: 1695
The relative sensitivities of sensory and motor fusion to small binocular disparities 41: 1969
Are corresponding points fixed? 41: 2457
Emmetropization in chicks uses optical vergence and relative distance cues to decode defocus 41: 3197
Direction of heading and vestibular control of binocular eye movements 41: 3215
Adaptive control of pursuit, vergence and eye torsion in humans: basic and clinical implications 41: 3331
Plasticity of convergence-dependent variations of cyclovergence with vertical gaze 41: 3353
Organisation of signals involved in binocular perception and vergence control 41: 3497

EYE-MOVEMENTS, VESTIBULO-OCULAR
Three-dimensional eye position during static roll and pitch in humans 41: 2127
Orienting otolith-ocular reflexes in the rabbit during static and dynamic tilts and off-vertical axis rotation 41: 3255
The visual consequences of deviations in the orientation of the axis of rotation of the human vestibulo-ocular reflex 41: 3271

FACE RECOGNITION
Identification of facial images in peripheral vision 41: 599
A principal component analysis of facial expressions 41: 1179
Bubbles: a technique to reveal the use of information in recognition tasks 41: 2261
The size-tuning of the face-distortion after-effect 41: 2979
Human and automatic face recognition: a comparison across image formats 41: 3185

FEATURE DETECTION
Change in feature space is not necessary for the flash-lag effect 41: 1103
Spatial aspects of object formation revealed by a new illusion, shine-through 41: 2325
Shine-through: temporal aspects 41: 2337

FISH VISION
Ocular media transmission of coral reef fish — can coral reef fish see ultraviolet light? 41: 133
The development of the crystalline lens is sensitive to visual input in the African cichlid fish, *Haplochromis burtoni* 41: 549
Gradient refractive index of the crystalline lens of the Black Oreo Dory *(Allocyttus Niger)*: comparison of magnetic resonance imaging (MRI) and laser ray-trace 41: 973
Ionochromic properties of long-wave-sensitive cones in the goldfish retina: an electrophysiological and microspectrophotometric study 41: 1755
Refractive state and accommodation in the eyes of free-swimming *versus* restrained juvenile lemon sharks *(Negaprion brevirostris)* 41: 1885
Gradual and partial loss of corner cone-occupied area in the retina of rainbow trout 41: 3073

FIXATION
Saccade target selection in visual search: the effect of information from the previous fixation 41: 87
Mislocalization of peripheral targets during fixation 41: 343
Fixation could simplify, not complicate, the interpretation of retinal flow 41: 815
Eye movement control in reading: word predictability has little influence on initial landing positions in words 41: 943
A model of eye movements and visual working memory during problem solving in geometry 41: 1561
The joint contributions of saccades and ocular drift to repeated ocular fixations 41: 1709
Effect of stimulus contrast on performance and eye movements in visual search 41: 1817
Are corresponding points fixed? 41: 2457
Direction of heading and vestibular control of binocular eye movements 41: 3215
The omnipresent prolongation of visual fixations: saccades are inhibited by changes in situation and in subject's activity 41: 3345
Fixation location effects on fixation durations during reading: an inverted optimal viewing position effect 41: 3513
Eye movements during reading: a theory of saccade initiation times 41: 3567
Oculomotor behavior and perceptual strategies in complex tasks 41: 3587
Eye movements and familiarity effects in visual search 41: 3763

FLICKER
Comparing increment and decrement probes in the probed-sinewave paradigm 41: 1119
Chromatic and achromatic defects in patients with progressing glaucoma 41: 1215
Multiple processes mediate flicker sensitivity 41: 2449

Snakes and ladders: the role of temporal modulation in visual contour integration 41: 3775
The influence of bright background flicker during different saccade periods on saccadic performance 41: 3909

FMRI
Visual areas and spatial summation in human visual cortex 41: 1321
Functional organisation of the saccadic reference system processing extraretinal signals in humans 41: 1351
Mapping visual cortex in monkeys and humans using surface-based atlases 41: 1359
The lateral occipital complex and its role in object recognition 41: 1409
Putting spatial attention on the map: timing and localization of stimulus selection processes in striate and extrastriate visual areas 41: 1437
Sustained extrastriate cortical activation without visual awareness revealed by fMRI studies of hemianopic patients 41: 1459
Brain activity evoked by inverted and imagined biological motion 41: 1475

FORM PERCEPTION
Edge co-occurrence in natural images predicts contour grouping performance 41: 711
Detecting shape deformation of moving patterns 41: 991
Configuration specificity in bisection acuity 41: 1133
On the psychophysics of the shape triangle 41: 1153
Event-related brain potentials during selective attention to depth and form in global stereopsis 41: 1379
Information limitations in perception of shape from texture 41: 1519
What defines a view? 41: 1981
Interaction of visual prior constraints 41: 2653
Segmentation in structure from motion: modeling and psychophysics 41: 2715
Colour, form, and movement are not perceived simultaneously 41: 2909
The stationarity hypothesis: an allocentric criterion in visual perception 41: 3023
Perception viewed as an inverse problem 41: 3145 (mini–review)
How vertical disparities assist judgements of distance 41: 3455
First-order structure induces the 3-D curvature contrast effect 41: 3829
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873
Function of center-surround antagonism for motion in visual area MT/V5: a modeling study 41: 3917

FOVEA
Spatial neural modulation transfer function of human foveal visual system for equiluminous chromatic gratings 41: 1659
Gecko vision–retinal organization, foveae and implications for binocular vision 41: 2043
Filling-in of the foveal blue scotoma 41: 2961
Binocular summation for grating detection and resolution in foveal and peripheral vision 41: 3093
Direction of heading and vestibular control of binocular eye movements 41: 3215
Can the amplitude difference spectrum peak frequency explain the foveal crowding effect? 41: 3693

GAIN CONTROL
Dependency of reaction times to motion onset on luminance and chromatic contrast 41: 1039
Information theoretical evaluation of parametric models of gain control in blowfly photoreceptor cells 41: 1851
Contrast gain mechanism or transient channel? Why the effects of a background pattern alter over time 41: 1879
Automatic gain control contrast mechanisms are modulated by attention in humans: evidence from visual evoked potentials 41: 2435
Flanker effects in peripheral contrast discrimination—psychophysics and modeling 41: 3663

GANGLION CELLS
The development and mature organisation of the end-artery retinal vasculature in a marsupial, the dunnart *Sminthopsis crassicaudata* 41: 13
M and P retinal ganglion cells of the owl monkey: morphology, size and photoreceptor convergence 41: 119
Chromatic and achromatic defects in patients with progressing glaucoma 41: 1215
High-resolution spatio-temporal mapping of visual pathways using multi-electrode arrays 41: 1261
Resolution, separation of retinal ganglion cells, and cortical magnification in humans 41: 1313

GENES
Measurement of corneal sublayer thickness and transparency in transgenic mice with altered corneal clarity using in vivo confocal microscopy 41: 1283
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779
Analysis of photoreceptor function and inner retinal activity in juvenile X-linked retinoschisis 41: 3931

GROUPING
Perceptual grouping via spatial selection in a focused-attention task 41: 611
Edge co-occurrence in natural images predicts contour grouping performance 41: 711
Neural synergy in visual grouping: when good continuation meets common fate 41: 2057
Lines and dots: characteristics of the motion integration process 41: 2207
Surface color from boundaries: a new 'watercolor' illusion 41: 2669
Luminance and chromatic cues in a spatial integration task 41: 3705

HEAD MOVEMENTS
Depth thresholds of motion parallax as a function of head movement velocity 41: 2835
The stationarity hypothesis: an allocentric criterion in visual perception 41: 3023
Experimental control of eye and head positions prior to head-unrestrained gaze shifts in monkey 41: 3243
The visual consequences of deviations in the orientation of the axis of rotation of the human vestibulo-ocular reflex 41: 3271
Early head movements elicited by visual stimuli or collicular electrical stimulation in the cat 41: 3283
Cortical and subcortical contributions to coordinated eye and head movements 41: 3295

Temporal coordination of the human head and eye during a natural sequential tapping task 41: 3307

HEADING PERCEPTION
Fixation could simplify, not complicate, the interpretation of retinal flow 41: 815
Pursuit affects precision of perceived heading for small viewing apertures 41: 2375
Direction of heading and vestibular control of binocular eye movements 41: 3215
The subjective vertical and the sense of self orientation during active body tilt 41: 3229
Heading and path percepts from visual flow and eye pursuit signals 41: 3467

HISTOCHEMISTRY. *see* NEUROCHEMISTRY

HORIZONTAL CELLS
The influence of HEPES on light responses of rabbit horizontal cells 41: 2165

HYPERACUITY
Spatial aspects of object formation revealed by a new illusion, shine-through 41: 2325
Shine-through: temporal aspects 41: 2337

ILLUSION (*see also* AFTEREFFECTS)
Phantom surface captures stereopsis 41: 187
Orientation processing mechanisms revealed by the plaid tilt illusion 41: 483
The persistence of position 41: 529
Interaction between first- and second-order orientation channels revealed by the tilt illusion: psychophysics and computational modelling 41: 1057
Configuration specificity in bisection acuity 41: 1133
Building surfaces from borders in Areas 17 and 18 of the cat 41: 1389
The effect of the spatial arrangement of target lines on perceived speed 41: 1669
Isolating the M(y)-cell response in dyslexia using the spatial frequency doubling illusion 41: 2139
Spatial aspects of object formation revealed by a new illusion, shine-through 41: 2325
Shine-through: temporal aspects 41: 2337
Two competing mechanisms underlying neon color spreading, visual phantoms and grating induction 41: 2347
A multiscale spatial filtering account of the Wertheimer–Benary effect and the corrugated Mondrian 41: 2487
Surface color from boundaries: a new 'watercolor' illusion 41: 2669
Transducer models of head-centred motion perception 41: 2741
Cue interactions, border ownership and illusory contours 41: 2827
A flash-lag effect in random motion 41: 3101
Anisotropy in judging the absolute direction of motion 41: 3677
Visual summation of luminance lines and illusory contours induced by pictorial, motion, and disparity cues 41: 3805
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873

ILLUSORY CONTOURS. *see* ILLUSION

IMAGE QUALITY
The attenuation of perceived image smear during saccades 41: 521
Disconjugate oculomotor learning caused by feeble image-size inequality: differences between secondary and tertiary positions 41: 625
Photographic reproduction of out-of-focus and distorted ocular imagery 41: 1489
Linear mechanisms can produce motion sharpening 41: 2771

IMMUNOCHEMISTRY
Immunocytochemical and electrophysiological characterization of GABA receptors in the frog and turtle retina 41: 691
Localization of neurotransmitters and calcium binding proteins to neurons of salamander and mudpuppy retinas 41: 1771

INCREMENT THRESHOLD
Stimulus probability directs spatial attention: an enhancement of sensitivity in humans and monkeys 41: 57
Comparing increment and decrement probes in the probed-sinewave paradigm 41: 1119

INSECT VISION
Colour thresholds and receptor noise: behavior and physiology compared 41: 639
Outdoor performance of a motion-sensitive neuron in the blowfly 41: 3627

INTEROCULAR TRANSFER. *see* AFTEREFFECTS

LATENCY. *see* REACTION TIME

LATERAL INHIBITION
Spatial-frequency and contrast properties of crowding 41: 1833
Flanker effects in peripheral contrast discrimination—psychophysics and modeling 41: 3663
Can the amplitude difference spectrum peak frequency explain the foveal crowding effect? 41: 3693

LATERAL INTERACTIONS
Measurement and modeling of center-surround suppression and enhancement 41: 571
The consequences of opponent rectification: the effect of surround size and luminance on color appearance 41: 859
Spatial-frequency and contrast properties of crowding 41: 1833
Contextual influences on orientation discrimination: binding local and global cues 41: 1915
Target/surround asymmetry in perceptual filling-in 41: 2065

Contour interaction in amblyopia: scale selection 41: 2285
Multiple processes mediate flicker sensitivity 41: 2449
Surface color from boundaries: a new 'watercolor' illusion 41: 2669
Contextual modulation of orientation discrimination is independent of stimulus processing time 41: 2813

LENS
The spherical aberration of the crystalline lens of the human eye 41: 235
The development of the crystalline lens is sensitive to visual input in the African cichlid fish, *Haplochromis burtoni* 41: 549
Gradient refractive index of the crystalline lens of the Black Oreo Dory *(Allocyttus Niger):* comparison of magnetic resonance imaging (MRI) and laser ray-trace 41: 973
The shape of the aging human lens: curvature, equivalent refractive index and the lens paradox 41: 1867
On modeling the causes of presbyopia 41: 3083 (letter)
The ageing lens 41: 3089 (letter)

LISTING'S LAW
Effect of light sleep on three-dimensional eye position in static roll and pitch 41: 495
Three-dimensional eye position during static roll and pitch in humans 41: 2127
Chameleon eye position obeys Listing's law 41: 2245
Plasticity of convergence-dependent variations of cyclovergence with vertical gaze 41: 3353
Adaptation of torsional eye alignment in relation to smooth pursuit and saccades 41: 3735

LOW VISION
Evaluation of the NEI visual functioning questionnaire as an interval measure of visual ability in low vision 41: 397
Psychophysics of reading: XX. Linking letter recognition to reading speed in central and peripheral vision 41: 725

LUMINANCE
The role of chromatic contrast and luminance polarity in stereoscopic segmentation 41: 375
The consequences of opponent rectification: the effect of surround size and luminance on color appearance 41: 859
Dependency of reaction times to motion onset on luminance and chromatic contrast 41: 1039
Spatial neural modulation transfer function of human foveal visual system for equiluminous chromatic gratings 41: 1659
Development of psychophysically-derived detection contours in L- and M-cone contrast space 41: 1791
Reaction time in automated kinetic perimetry: effects of stimulus luminance, eccentricity, and movement direction 41: 2157
Afferent delays and the mislocalization of perisaccadic stimuli 41: 2631
Darkness filling-in: a neural model of darkness induction 41: 3649
Luminance and chromatic cues in a spatial integration task 41: 3705
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873

MACH BANDS. *see* CONTOUR PERCEPTION

MASKING
Cardinal axes for radial and circular motion, revealed by summation and by masking 41: 473
The attenuation of perceived image smear during saccades 41: 521
A binocular site for contrast-modulated masking 41: 873
Spatial-frequency and contrast properties of crowding 41: 1833
Contrast gain mechanism or transient channel? Why the effects of a background pattern alter over time 41: 1879
Spatial aspects of object formation revealed by a new illusion, shine-through 41: 2325
Shine-through: temporal aspects 41: 2337
Peripheral and parafoveal cueing and masking effects on saccadic selectivity in a gaze-contingent window paradigm 41: 2757
Contextual modulation of orientation discrimination is independent of stimulus processing time 41: 2813
The spatial gradient of visual masking by object substitution 41: 3121
Flanker effects in peripheral contrast discrimination—psychophysics and modeling 41: 3663

MCCOLLOUGH EFFECT. *see* AFTEREFFECTS

MEMORY. *see* COGNITION

MEMORY PERFORMANCE
Different effects of lorazepam and diazepam on perceptual integration 41: 2297
Saccades to remembered targets exhibit enhanced orbital position effects in monkeys 41: 2393
Visual scene memory and the guidance of saccadic eye movements 41: 3597

MENTAL IMAGERY
Brain activity evoked by inverted and imagined biological motion 41: 1475

METACONTRAST. *see* MASKING

MORPHOLOGY. *see* NEUROANATOMY

MOTION PERCEPTION
Discrimination of an orientation difference in dynamic textures 41: 275
Interocular interactions reveal the opponent structure of motion mechanisms 41: 441
The persistence of position 41: 529
IOC, Vector sum, and squaring: three different motion effects or one? 41: 965

Detecting shape deformation of moving patterns 41: 991
Dependency of reaction times to motion onset on luminance and chromatic contrast 41: 1039
Change in feature space is not necessary for the flash-lag effect 41: 1103
Differential effect of attention to translation and expansion on motion aftereffects (MAE) 41: 1107
The time course of the lower threshold of motion during rapid events of adaptation 41: 1139
Opsoclonus-induced occipital deactivation with a region-specific distribution 41: 1209
Brain activity evoked by inverted and imagined biological motion 41: 1475
Attention induced motion blindness 41: 1613
Attentional shifts between surfaces: effects on detection and early brain potentials 41: 1619
Coherence of early motion signals 41: 1631
Cancellation of self-induced retinal image motion during smooth pursuit eye movements 41: 1685
Visual evoked potentials elicited by chromatic motion onset 41: 2005
Filling-in the details on perceptual fading 41: 2107
Regularization in a neural model of motion perception 41: 2273
Characterising temporal delay filters in biological motion detectors 41: 2311
Sensitive calibration and measurement procedures based on the amplification principle in motion perception 41: 2355
Depth thresholds of motion parallax as a function of head movement velocity 41: 2835
Colour, form, and movement are not perceived simultaneously 41: 2909
Perception viewed as an inverse problem 41: 3145 (mini–review)
Hitting what one wants to hit and missing what one wants to miss 41: 3321
Short-latency ocular following in humans: sensitivity to binocular disparity 41: 3371
Systematic eye movements do not account for the perception of motion during attentive tracking 41: 3505
Outdoor performance of a motion-sensitive neuron in the blowfly 41: 3627
First-order structure induces the 3-D curvature contrast effect 41: 3829
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873
Function of center-surround antagonism for motion in visual area MT/V5: a modeling study 41: 3917
Characterising temporal delay filters in biological motion detectors 41: 3943

MOTION PERCEPTION, APERTURE PROBLEM

Lines and dots: characteristics of the motion integration process 41: 2207
Neural dynamics of motion integration and segmentation within and across apertures 41: 2521

MOTION PERCEPTION, APPARENT MOTION

Perceptual learning of apparent motion mediated through ON- and OFF-pathways in human vision 41: 353
Relative roles of 3-D and 2-D coordinate systems in solving the correspondence problem in apparent motion 41: 759
The effect of the spatial arrangement of target lines on perceived speed 41: 1669
Direction-specific changes of sensitivity after brief apparent motion stimuli 41: 2195
A flash-lag effect in random motion 41: 3101

MOTION PERCEPTION, DIRECTIONAL SENSITIVITY
Perceived motion in orientational afterimages: direction and speed 41: 161
Nonlinear contribution of eye velocity to motion perception 41: 385
Different populations of neurons contribute to the detection and discrimination of visual motion 41: 685
Infant direction discrimination thresholds 41: 1049
Effects of set-size and selective spatial attention on motion processing 41: 1501
Directional tuning of human motion adaptation as reflected by the motion VEP 41: 2187
Direction-specific changes of sensitivity after brief apparent motion stimuli 41: 2195
Pursuit affects precision of perceived heading for small viewing apertures 41: 2375
Motion rivalry impairs motion repulsion 41: 3639
Anisotropy in judging the absolute direction of motion 41: 3677
Non-veridical visual motion perception immediately after saccades 41: 3751

MOTION PERCEPTION, OPTIC FLOW
Humans can use optic flow to estimate distance of travel 41: 213
Cardinal axes for radial and circular motion, revealed by summation and by masking 41: 473
Role of motion integration in contour perception 41: 705
Modulation of spatial attention with unidirectional field motion: an implication for the shift of the OKN beating field 41: 801
Fixation could simplify, not complicate, the interpretation of retinal flow 41: 815
Temporal integration of optic flow, measured by contrast and coherence thresholds 41: 1891
Broad direction bandwidths for complex motion mechanisms 41: 1901
Pursuit affects precision of perceived heading for small viewing apertures 41: 2375
Segmentation in structure from motion: modeling and psychophysics 41: 2715
Heading and path percepts from visual flow and eye pursuit signals 41: 3467

MOTION PERCEPTION, SPEED SENSITIVITY
Perceived motion in orientational afterimages: direction and speed 41: 161
Nonlinear contribution of eye velocity to motion perception 41: 385
The effect of the spatial arrangement of target lines on perceived speed 41: 1669
The stereoscopic (cyclopean) motion aftereffect is dependent upon the temporal frequency of adapting motion 41: 1809
Increased sensitivity to speed changes during adaptation to first-order, but not to second-order motion 41: 1825
Spatial scale of motion segmentation from speed cues 41: 2697
Transducer models of head-centred motion perception 41: 2741
Linear mechanisms can produce motion sharpening 41: 2771
Snakes and ladders: the role of temporal modulation in visual contour integration 41: 3775

MYOPIA
Overnight lens removal avoids changes in refraction and eye growth produced by plano soft contact lenses in infant marmosets 41: 257
Compensatory changes in eye growth and refraction induced by daily wear of soft contact lenses in young marmosets 41: 267
The effect of reading and near-work on the development of myopia in emmetropic boys: a prospective, controlled, three-year follow-up study 41: 2511
Emmetropization in chicks uses optical vergence and relative distance cues to decode defocus 41: 3197

NATURAL IMAGES
Edge co-occurrence in natural images predicts contour grouping performance 41: 711
Occlusions contribute to scaling in natural images 41: 955
A two-layer sparse coding model learns simple and complex cell receptive fields and topography from natural images 41: 2413
What controls attention in natural environments? 41: 3535
Outdoor performance of a motion-sensitive neuron in the blowfly 41: 3627

NEURAL NETWORKS
Perceived motion in orientational afterimages: direction and speed 41: 161
A model of visual-spatial memory across saccades 41: 1575
A two-layer sparse coding model learns simple and complex cell receptive fields and topography from natural images 41: 2413
Neural dynamics of motion integration and segmentation within and across apertures 41: 2521

NEUROANATOMY
Continued neurogenesis is not a pre-requisite for regeneration of a topographic retino-tectal projection 41: 1765
The optic nerve head component of the monkey's *(Macaca mulatta)* multifocal electroretinogram (mERG) 41: 2029
The premotor region essential for rapid vertical eye movements shows early involvement in Alzheimer's disease-related cytoskeletal pathology 41: 2149
Early head movements elicited by visual stimuli or collicular electrical stimulation in the cat 41: 3283
Cortical and subcortical contributions to coordinated eye and head movements 41: 3295
Directional effect of inactivation of the nucleus of the optic tract on optokinetic nystagmus in the cat 41: 3389
Signal transformations from cerebral cortex to superior colliculus for the generation of saccades 41: 3399
Interocular timing differences in the horizontal components of human saccades 41: 3413

NEUROCHEMISTRY
Immunocytochemical and electrophysiological characterization of GABA receptors in the frog and turtle retina 41: 691
Glutamate regulates the viability of retinal cells in culture 41: 841
On-bipolar cells and depolarising third-order neurons as the origin of the ERG-b-wave in the RCS rat 41: 1091
A hierarchy of the functional organization for color, form and disparity in primate visual area V2 41: 1333
Ionochromic properties of long-wave-sensitive cones in the goldfish retina: an electrophysiological and microspectrophotometric study 41: 1755
Localization of neurotransmitters and calcium binding proteins to neurons of salamander and mudpuppy retinas 41: 1771
The influence of HEPES on light responses of rabbit horizontal cells 41: 2165
Different effects of lorazepam and diazepam on perceptual integration 41: 2297

NEUROTRANSMITTER. *see* NEUROCHEMISTRY

NOISE
Colour thresholds and receptor noise: behavior and physiology compared 41: 639
Effects of horizontal and vertical additive disparity noise on stereoscopic corrugation detection 41: 3133

OBJECT RECOGNITION
Invariance of long-term visual priming to scale, reflection, translation, and hemisphere 41: 221
The persistence of position 41: 529
The lateral occipital complex and its role in object recognition 41: 1409
Size tuning in the absence of spatial frequency tuning in object recognition 41: 1931
What defines a view? 41: 1981
Bubbles: a technique to reveal the use of information in recognition tasks 41: 2261
Implicit processing of shadows 41: 2305

OCCLUSION
Phantom surface captures stereopsis 41: 187
Occlusions contribute to scaling in natural images 41: 955

OCULAR MEDIA
Ocular media transmission of coral reef fish — can coral reef fish see ultraviolet light? 41: 133

OCULOMOTOR ANATOMY
The effect of reading and near-work on the development of myopia in emmetropic boys: a prospective, controlled, three-year follow-up study 41: 2511
A longitudinal study of the biometric and refractive changes in full-term infants during the first year of life 41: 2799

OPTIC FLOW. *see* MOTION PERCEPTION, OPTIC FLOW

OPTICAL QUALITY
Photographic reproduction of out-of-focus and distorted ocular imagery 41: 1489

ORIENTATION PERCEPTION
Orthogonal adaptation improves orientation discrimination 41: 151
Discrimination of an orientation difference in dynamic textures 41: 275
Orientation integration in detection and discrimination of contrast-modulated patterns 41: 295
The effect of orientation learning on contrast sensitivity 41: 463
Orientation processing mechanisms revealed by the plaid tilt illusion 41: 483
Interaction between first- and second-order orientation channels revealed by the tilt illusion: psychophysics and computational modelling 41: 1057

Information limitations in perception of shape from texture 41: 1519
Energy model for contrast detection: spatial-frequency and orientation selectivity in grating summation 41: 1547
The relatively small decline in orientation acuity as stimulus size decreases 41: 1723
An inverse oblique effect in human vision 41: 1749
Integration of local features into a global shape 41: 1785
Contextual influences on orientation discrimination: binding local and global cues 41: 1915
What defines a view? 41: 1981
Temporal resolution of orientation-based texture segregation 41: 2089
3D after-effects are due to shape and not disparity adaptation 41: 2733
Contextual modulation of orientation discrimination is independent of stimulus processing time 41: 2813
Neural model for processing the influence of visual orientation on visually perceived eye level (VPEL) 41: 2845
Influences of visual pitch and visual yaw on visually perceived eye level (VPEL) and straight ahead (VPSA) for erect and rolled-to-horizontal observers 41: 2873
Information limitations in perception of shape from texture 41: 2925 (publisher's note), 41: 2927 (erratum)
Perception of 3D surface orientation from skew symmetry 41: 3163
The subjective vertical and the sense of self orientation during active body tilt 41: 3229
Eye position sense contributes to the judgement of slant 41: 3447
Micropattern orientation and spatial localization 41: 3719
Detection thresholds for spiral Glass patterns 41: 3785
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883
Responding to feature or location: a re-examination of inhibition of return and facilitation of return 41: 3903

PATHOLOGY

Contrast discrimination deficits in retinitis pigmentosa are greater for stimuli that favor the magnocellular pathway 41: 671
Multifocal pupillary light response fields in normal subjects and patients with visual field defects 41: 1073
On-bipolar cells and depolarising third-order neurons as the origin of the ERG-b-wave in the RCS rat 41: 1091
Opsoclonus-induced occipital deactivation with a region-specific distribution 41: 1209
Chromatic and achromatic defects in patients with progressing glaucoma 41: 1215
MR studies of retinal oxygenation 41: 1307
Sustained extrastriate cortical activation without visual awareness revealed by fMRI studies of hemianopic patients 41: 1459
The paracentral visual field in multiple sclerosis: evidence for a deficit in interneuronal spatial summation? 41: 1735
Continued neurogenesis is not a pre-requisite for regeneration of a topographic retino-tectal projection 41: 1765
Isolating the M(y)-cell response in dyslexia using the spatial frequency doubling illusion 41: 2139
The premotor region essential for rapid vertical eye movements shows early involvement in Alzheimer's disease-related cytoskeletal pathology 41: 2149

Reaction time in automated kinetic perimetry: effects of stimulus luminance, eccentricity, and movement direction 41: 2157
Contour interaction in amblyopia: scale selection 41: 2285
Ultraviolet and middle wavelength sensitive cone responses in the electroretinogram (ERG) of normal and *Rpe*65 –/– mice 41: 2425
Evidence from a line bisection task for visuospatial neglect in Left Hemiparkinson's disease 41: 2677
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779
Visual search in migraine and visual discomfort groups 41: 3063
Is dyslexia caused by a visual deficit? 41: 3069 (letter)
Comment on letter to the editor: is dyslexia caused by a visual deficit? (Skottun, B.C., 2001) 41: 3071 (letter)
On modeling the causes of presbyopia 41: 3083 (letter)
The ageing lens 41: 3089 (letter)
Can contrast sensitivity functions in dyslexia be explained by inattention rather than a magnocellular deficit? 41: 3205
Analysis of photoreceptor function and inner retinal activity in juvenile X-linked retinoschisis 41: 3931

PATHWAYS, LUMINANCE AND CHROMATIC
Visual evoked potentials elicited by chromatic motion onset 41: 2005

PATHWAYS, MAGNOCELLULAR AND PARVOCELLULAR
Contrast discrimination deficits in retinitis pigmentosa are greater for stimuli that favor the magnocellular pathway 41: 671
Dependency of reaction times to motion onset on luminance and chromatic contrast 41: 1039
Pulse and steady-pedestal contrast discrimination: effect of spatial parameters 41: 2079
Isolating the M(y)-cell response in dyslexia using the spatial frequency doubling illusion 41: 2139
Automatic gain control contrast mechanisms are modulated by attention in humans: evidence from visual evoked potentials 41: 2435
Can contrast sensitivity functions in dyslexia be explained by inattention rather than a magnocellular deficit? 41: 3205

PATHWAYS, ON-OFF
Perceptual learning of apparent motion mediated through ON- and OFF-pathways in human vision 41: 353
Comparing increment and decrement probes in the probed-sinewave paradigm 41: 1119
Analysis of photoreceptor function and inner retinal activity in juvenile X-linked retinoschisis 41: 3931

PATTERN RECOGNITION
Detecting shape deformation of moving patterns 41: 991
Detection thresholds for spiral Glass patterns 41: 3785

PERCEPTUAL LEARNING
Is peripheral visual acuity susceptible to perceptual learning in the adult? 41: 47

Perceptual learning of apparent motion mediated through ON- and OFF-pathways in human vision 41: 353
The effect of orientation learning on contrast sensitivity 41: 463
Discriminating contrast discontinuities: asymmetries, dipper functions, and perceptual learning 41: 3009

PERIPHERAL VISION
Is peripheral visual acuity susceptible to perceptual learning in the adult? 41: 47
Mislocalization of peripheral targets during fixation 41: 343
Identification of facial images in peripheral vision 41: 599
Psychophysics of reading: XX. Linking letter recognition to reading speed in central and peripheral vision 41: 725
Reaction time in automated kinetic perimetry: effects of stimulus luminance, eccentricity, and movement direction 41: 2157
Saccadic countermanding: a comparison of central and peripheral stop signals 41: 2645
Peripheral and parafoveal cueing and masking effects on saccadic selectivity in a gaze-contingent window paradigm 41: 2757
Binocular summation for grating detection and resolution in foveal and peripheral vision 41: 3093

PERSISTENCE
Perceived motion in orientational afterimages: direction and speed 41: 161
The persistence of position 41: 529

PHASE SENSITIVITY
Coherence of early motion signals 41: 1631

PHILOSOPHICAL ISSUES
Unique hues: an old problem for a new generation 41: 1645, 41: 2811 (corrigendum)
Colour, form, and movement are not perceived simultaneously 41: 2909

PHOTOPIC VISION
Infant light adaptation shows Weber's law at photopic illuminances 41: 359
Two competing mechanisms underlying neon color spreading, visual phantoms and grating induction 41: 2347

PHOTOPIGMENTS
Retinal photoreceptors of paleognathous birds: the ostrich *(Struthio camelus)* and rhea *(Rhea americana)* 41: 1
Ionochromic properties of long-wave-sensitive cones in the goldfish retina: an electrophysiological and microspectrophotometric study 41: 1755
Ultraviolet and middle wavelength sensitive cone responses in the electroretinogram (ERG) of normal and *Rpe*65 –/– mice 41: 2425
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779

PHOTORECEPTORS (*see also* CONES; RODS)
Retinal photoreceptors of paleognathous birds: the ostrich *(Struthio camelus)* and rhea *(Rhea americana)* 41: 1

Stiles–Crawford effect of the first kind: assessment of photoreceptor alignments following dark patching 41: 103
M and P retinal ganglion cells of the owl monkey: morphology, size and photoreceptor convergence 41: 119
Colour thresholds and receptor noise: behavior and physiology compared 41: 639
Packing arrangement of the three cone classes in primate retina 41: 1291
Information theoretical evaluation of parametric models of gain control in blowfly photoreceptor cells 41: 1851
Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779
Analysis of photoreceptor function and inner retinal activity in juvenile X-linked retinoschisis 41: 3931

PLASTICITY
Plasticity of convergence-dependent variations of cyclovergence with vertical gaze 41: 3353

POLARIZED LIGHT
Depolarization effects in the human eye 41: 2687

PUPILS
Multifocal pupillary light response fields in normal subjects and patients with visual field defects 41: 1073
Depolarization effects in the human eye 41: 2687
Investigating sources of variability of monochromatic and transverse chromatic aberrations across eyes 41: 3861

REACTION TIME
Uncertainty, attentional capacity and chromatic mechanisms in visual search 41: 313
Dependency of reaction times to motion onset on luminance and chromatic contrast 41: 1039
Response characteristics of the normal retino-cortical pathways as determined with simultaneous recordings of pattern visual evoked potentials and simple motor reaction times 41: 1085
Change in feature space is not necessary for the flash-lag effect 41: 1103
Express saccades: is bimodality a result of the order of stimulus presentation? 41: 1145
Countermanding saccades with auditory stop signals: testing the race model 41: 1951
Reaction time in automated kinetic perimetry: effects of stimulus luminance, eccentricity, and movement direction 41: 2157
Afferent delays and the mislocalization of perisaccadic stimuli 41: 2631
Saccadic countermanding: a comparison of central and peripheral stop signals 41: 2645
Contextual modulation of orientation discrimination is independent of stimulus processing time 41: 2813
Colour, form, and movement are not perceived simultaneously 41: 2909
Visual search in migraine and visual discomfort groups 41: 3063
A flash-lag effect in random motion 41: 3101
The omnipresent prolongation of visual fixations: saccades are inhibited by changes in situation and in subject's activity 41: 3345
Interocular timing differences in the horizontal components of human saccades 41: 3413

Saccadic choice with asynchronous targets: evidence for independent randomisation 41: 3437
Visual search in depth 41: 3487
Motion rivalry impairs motion repulsion 41: 3639
A VEP study on visual processing of figural geometry 41: 3791
Responding to feature or location: a re-examination of inhibition of return and facilitation of return 41: 3903

READING
Disconjugate oculomotor learning caused by feeble image-size inequality: differences between secondary and tertiary positions 41: 625
Psychophysics of reading: XX. Linking letter recognition to reading speed in central and peripheral vision 41: 725
Eye movement control in reading: word predictability has little influence on initial landing positions in words 41: 943
Effect of stimulus contrast on performance and eye movements in visual search 41: 1817
Isolating the M(y)-cell response in dyslexia using the spatial frequency doubling illusion 41: 2139
Eye movement control in reading unspaced text: the case of the Japanese script 41: 2503
The effect of reading and near-work on the development of myopia in emmetropic boys: a prospective, controlled, three-year follow-up study 41: 2511
Is dyslexia caused by a visual deficit? 41: 3069 (letter)
Comment on letter to the editor: is dyslexia caused by a visual deficit? (Skottun, B.C., 2001) 41: 3071 (letter)
Can contrast sensitivity functions in dyslexia be explained by inattention rather than a magnocellular deficit? 41: 3205
Fixation location effects on fixation durations during reading: an inverted optimal viewing position effect 41: 3513
Reference frames in reading: evidence from visually and memory-guided saccades 41: 3547
Eye movements during reading: a theory of saccade initiation times 41: 3567

RECEPTIVE FIELDS (*see also individual cell types*)
Resolution, separation of retinal ganglion cells, and cortical magnification in humans 41: 1313
A two-layer sparse coding model learns simple and complex cell receptive fields and topography from natural images 41: 2413
Function of center-surround antagonism for motion in visual area MT/V5: a modeling study 41: 3917

RECEPTOR POTENTIAL. *see* CONES; ELECTRORETINOGRAM; PHOTORECEPTORS; RODS

REFRACTION
Overnight lens removal avoids changes in refraction and eye growth produced by plano soft contact lenses in infant marmosets 41: 257
Compensatory changes in eye growth and refraction induced by daily wear of soft contact lenses in young marmosets 41: 267
The development of the crystalline lens is sensitive to visual input in the African cichlid fish, *Haplochromis burtoni* 41: 549

Gradient refractive index of the crystalline lens of the Black Oreo Dory *(Allocyttus Niger)*: comparison of magnetic resonance imaging (MRI) and laser ray-trace 41: 973
The shape of the aging human lens: curvature, equivalent refractive index and the lens paradox 41: 1867
Refractive state and accommodation in the eyes of free-swimming *versus* restrained juvenile lemon sharks *(Negaprion brevirostris)* 41: 1885
A longitudinal study of the biometric and refractive changes in full-term infants during the first year of life 41: 2799

RETINA
The development and mature organisation of the end-artery retinal vasculature in a marsupial, the dunnart *Sminthopsis crassicaudata* 41: 13
Stiles–Crawford effect of the first kind: assessment of photoreceptor alignments following dark patching 41: 103
M and P retinal ganglion cells of the owl monkey: morphology, size and photoreceptor convergence 41: 119
Immunocytochemical and electrophysiological characterization of GABA receptors in the frog and turtle retina 41: 691
Glutamate regulates the viability of retinal cells in culture 41: 841
On-bipolar cells and depolarising third-order neurons as the origin of the ERG-b-wave in the RCS rat 41: 1091
Imaging visual function with the multifocal m-sequence technique 41: 1241
High-resolution spatio-temporal mapping of visual pathways using multi-electrode arrays 41: 1261
Packing arrangement of the three cone classes in primate retina 41: 1291
MR studies of retinal oxygenation 41: 1307
Resolution, separation of retinal ganglion cells, and cortical magnification in humans 41: 1313
Ionochromic properties of long-wave-sensitive cones in the goldfish retina: an electrophysiological and microspectrophotometric study 41: 1755
Localization of neurotransmitters and calcium binding proteins to neurons of salamander and mudpuppy retinas 41: 1771
Gecko vision–retinal organization, foveae and implications for binocular vision 41: 2043
Isolating the M(y)-cell response in dyslexia using the spatial frequency doubling illusion 41: 2139
The influence of HEPES on light responses of rabbit horizontal cells 41: 2165
Depolarization effects in the human eye 41: 2687
Unilateral light–dark transitions affect choroidal blood flow in both eyes 41: 2919
Analysis of photoreceptor function and inner retinal activity in juvenile X-linked retinoschisis 41: 3931

RETINAL DISEASE. *see* PATHOLOGY

ROD-CONE INTERACTION. *see* CONES; RODS

RODS
Retinal photoreceptors of paleognathous birds: the ostrich *(Struthio camelus)* and rhea *(Rhea americana)* 41: 1
Multiple processes mediate flicker sensitivity 41: 2449

Augmented rod bipolar cell function in partial receptor loss: an ERG study in P23H rhodopsin transgenic and aging normal rats 41: 2779

SACCADES. *see* EYE-MOVEMENTS, SACCADIC

SCOTOMA
Filling-in of the foveal blue scotoma 41: 2961

SEGMENTATION
The role of chromatic contrast and luminance polarity in stereoscopic segmentation 41: 375
Contextual influences on orientation discrimination: binding local and global cues 41: 1915
Lines and dots: characteristics of the motion integration process 41: 2207
Neural dynamics of motion integration and segmentation within and across apertures 41: 2521
Spatial scale of motion segmentation from speed cues 41: 2697
Segmentation in structure from motion: modeling and psychophysics 41: 2715
Discriminating contrast discontinuities: asymmetries, dipper functions, and perceptual learning 41: 3009
Short-latency ocular following in humans: sensitivity to binocular disparity 41: 3371
Function of center-surround antagonism for motion in visual area MT/V5: a modeling study 41: 3917

SIZE PERCEPTION
Size tuning in the absence of spatial frequency tuning in object recognition 41: 1931
Perceived length in the central visual field: evidence for visual field asymmetries 41: 2119
Size-based selection in rapid serial visual presentation 41: 2221
The size-tuning of the face-distortion after-effect 41: 2979
Apparent size of an object remains uncompressed during presaccadic compression of visual space 41: 3039
How vertical disparities assist judgements of distance 41: 3455
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883

SPATIAL FREQUENCY (*see also* PHASE SENSITIVITY)
Invariance of long-term visual priming to scale, reflection, translation, and hemisphere 41: 221
Red-green and blue-yellow mechanisms are matched in sensitivity for temporal and spatial modulation 41: 245
Occlusions contribute to scaling in natural images 41: 955
The role of spatial frequency in color induction 41: 1007
Response characteristics of the normal retino-cortical pathways as determined with simultaneous recordings of pattern visual evoked potentials and simple motor reaction times 41: 1085
Information limitations in perception of shape from texture 41: 1519

Energy model for contrast detection: spatial-frequency and orientation selectivity in grating summation 41: 1547
Spatial neural modulation transfer function of human foveal visual system for equiluminous chromatic gratings 41: 1659
Spatial-frequency and contrast properties of crowding 41: 1833
Size tuning in the absence of spatial frequency tuning in object recognition 41: 1931
Isolating the M(y)-cell response in dyslexia using the spatial frequency doubling illusion 41: 2139
Information limitations in perception of shape from texture 41: 2925 (publisher's note), 41: 2927 (erratum)
Can the amplitude difference spectrum peak frequency explain the foveal crowding effect? 41: 3693
Motion-surface labeling by orientation, spatial frequency and luminance polarity in 3-D structure-from-motion 41: 3873

SPATIAL LOCALIZATION
Mislocalization of peripheral targets during fixation 41: 343
Perception of relation of stimuli locations successively flashed before saccade 41: 935
Afferent delays and the mislocalization of perisaccadic stimuli 41: 2631
A flash-lag effect in random motion 41: 3101

SPATIAL VISION (*see also* PHASE SENSITIVITY; SPATIAL LOCALIZATION)
Stimulus probability directs spatial attention: an enhancement of sensitivity in humans and monkeys 41: 57
Orthogonal adaptation improves orientation discrimination 41: 151
Orientation integration in detection and discrimination of contrast-modulated patterns 41: 295
Compression of space in visual memory 41: 329
Nonlocal interactions in color perception: nonlinear processing of chromatic signals from remote inducers 41: 1535
Spatial neural modulation transfer function of human foveal visual system for equiluminous chromatic gratings 41: 1659
The relatively small decline in orientation acuity as stimulus size decreases 41: 1723
Integration of local features into a global shape 41: 1785
Neural synergy in visual grouping: when good continuation meets common fate 41: 2057
Stereoprocessing of cyclopean depth images: horizontally elongated summation fields 41: 2235
Smooth eye movements and spatial localisation 41: 2253
Contour interaction in amblyopia: scale selection 41: 2285
Spatial aspects of object formation revealed by a new illusion, shine-through 41: 2325
A two-layer sparse coding model learns simple and complex cell receptive fields and topography from natural images 41: 2413
Envelope size tuning for stereo-depth perception of small and large disparities 41: 2555
Evidence from a line bisection task for visuospatial neglect in Left Hemiparkinson's disease 41: 2677
Spatial scale of motion segmentation from speed cues 41: 2697
Linear mechanisms can produce motion sharpening 41: 2771
Neural model for processing the influence of visual orientation on visually perceived eye level (VPEL) 41: 2845
Influences of visual pitch and visual yaw on visually perceived eye level (VPEL) and straight ahead (VPSA) for erect and rolled-to-horizontal observers 41: 2873

Is second-order spatial loss in amblyopia explained by the loss of first-order spatial input? 41: 2951
Spatial interactions minimize relative disparity between adjacent surfaces 41: 2995
The stationarity hypothesis: an allocentric criterion in visual perception 41: 3023
The spatial gradient of visual masking by object substitution 41: 3121
Luminance and chromatic cues in a spatial integration task 41: 3705
Micropattern orientation and spatial localization 41: 3719
Non-veridical visual motion perception immediately after saccades 41: 3751

SPECTRAL SENSITIVITY
Ocular media transmission of coral reef fish — can coral reef fish see ultraviolet light? 41: 133
Study of colour discrimination with comb-filtered spectra 41: 541
Ultraviolet and middle wavelength sensitive cone responses in the electroretinogram (ERG) of normal and *Rpe*65 –/– mice 41: 2425

SPEED. *see* MOTION PERCEPTION, SPEED SENSITIVITY

SPHERICAL ABERRATION. *see* ABERRATION

STABILIZED VISION
Visual jitter: evidence for visual-motion-based compensation of retinal slip due to small eye movements 41: 173
Filling-in of the foveal blue scotoma 41: 2961
Texture fading correlates with stimulus salience 41: 2969
Direction of heading and vestibular control of binocular eye movements 41: 3215

STEREOPSIS
Strength of depth effects induced by three types of vertical disparity 41: 37
Phantom surface captures stereopsis 41: 187
The role of chromatic contrast and luminance polarity in stereoscopic segmentation 41: 375
Effects of disparity-perspective cue conflict on depth contrast 41: 415
Adaptation to disparity but not to perceived depth 41: 883
A hierarchy of the functional organization for color, form and disparity in primate visual area V2 41: 1333
Event-related brain potentials during selective attention to depth and form in global stereopsis 41: 1379
The stereoscopic (cyclopean) motion aftereffect is dependent upon the temporal frequency of adapting motion 41: 1809
The relative sensitivities of sensory and motor fusion to small binocular disparities 41: 1969
Stereoprocessing of cyclopean depth images: horizontally elongated summation fields 41: 2235
Envelope size tuning for stereo-depth perception of small and large disparities 41: 2555
3D after-effects are due to shape and not disparity adaptation 41: 2733
Spatial interactions minimize relative disparity between adjacent surfaces 41: 2995
Stereoacuity thresholds in the presence of a reference surface 41: 3051

Effects of horizontal and vertical additive disparity noise on stereoscopic corrugation detection 41: 3133
Short-latency ocular following in humans: sensitivity to binocular disparity 41: 3371
How vertical disparities assist judgements of distance 41: 3455

STILES–CRAWFORD EFFECT
Stiles–Crawford effect of the first kind: assessment of photoreceptor alignments following dark patching 41: 103

STRABISMUS (*see also* AMBLYOPIA)
Conditions of perceptual selection and suppression during interocular rivalry in strabismic and normal cats 41: 771
Clinical suppression in monkeys reared with abnormal binocular visual experience 41: 1593
Saccadic binocular coordination in alternating exotropia 41: 3425

SUMMATION
Cardinal axes for radial and circular motion, revealed by summation and by masking 41: 473
Broad direction bandwidths for complex motion mechanisms 41: 1901
Visual summation of luminance lines and illusory contours induced by pictorial, motion, and disparity cues 41: 3805

SUMMATION, BINOCULAR
Binocular summation for grating detection and resolution in foveal and peripheral vision 41: 3093

SUMMATION, SPATIAL
Measurement and modeling of center-surround suppression and enhancement 41: 571
Visual areas and spatial summation in human visual cortex 41: 1321
Energy model for contrast detection: spatial-frequency and orientation selectivity in grating summation 41: 1547
The paracentral visual field in multiple sclerosis: evidence for a deficit in interneuronal spatial summation? 41: 1735
Pulse and steady-pedestal contrast discrimination: effect of spatial parameters 41: 2079
Stereoprocessing of cyclopean depth images: horizontally elongated summation fields 41: 2235
Neural model for processing the influence of visual orientation on visually perceived eye level (VPEL) 41: 2845

SUMMATION, TEMPORAL
Temporal integration of optic flow, measured by contrast and coherence thresholds 41: 1891

SURFACE PERCEPTION
Phantom surface captures stereopsis 41: 187
Information limitations in perception of shape from texture 41: 1519
Attentional shifts between surfaces: effects on detection and early brain potentials 41: 1619

Interaction of visual prior constraints 41: 2653
Cue interactions, border ownership and illusory contours 41: 2827
Information limitations in perception of shape from texture 41: 2925 (publisher's note), 41: 2927 (erratum)
Spatial interactions minimize relative disparity between adjacent surfaces 41: 2995
Effects of horizontal and vertical additive disparity noise on stereoscopic corrugation detection 41: 3133
Perception viewed as an inverse problem 41: 3145 (mini–review)
Perception of 3D surface orientation from skew symmetry 41: 3163
Eye position sense contributes to the judgement of slant 41: 3447

SYMMETRY PERCEPTION

Perception of 3D surface orientation from skew symmetry 41: 3163
A VEP study on visual processing of figural geometry 41: 3791

TECHNIQUES

Simultaneous near-infrared spectroscopy monitoring of left and right occipital areas reveals contra-lateral hemodynamic changes upon hemi-field paradigm 41: 97
Characterization and use of a digital light projector for vision research 41: 427
Gradient refractive index of the crystalline lens of the Black Oreo Dory *(Allocyttus Niger):* comparison of magnetic resonance imaging (MRI) and laser ray-trace 41: 973
Multifocal pupillary light response fields in normal subjects and patients with visual field defects 41: 1073
A principal component analysis of facial expressions 41: 1179
Functional brain imaging in vision (editorial) 41: 1239
Imaging visual function with the multifocal m-sequence technique 41: 1241
Functional brain imaging based on ERD/ERS 41: 1257
High-resolution spatio-temporal mapping of visual pathways using multi-electrode arrays 41: 1261
PET/SPECT: functional imaging beyond flow 41: 1277
Measurement of corneal sublayer thickness and transparency in transgenic mice with altered corneal clarity using in vivo confocal microscopy 41: 1283
Packing arrangement of the three cone classes in primate retina 41: 1291
MR studies of retinal oxygenation 41: 1307
Resolution, separation of retinal ganglion cells, and cortical magnification in humans 41: 1313
Visual areas and spatial summation in human visual cortex 41: 1321
A hierarchy of the functional organization for color, form and disparity in primate visual area V2 41: 1333
Functional organisation of the saccadic reference system processing extraretinal signals in humans 41: 1351
Mapping visual cortex in monkeys and humans using surface-based atlases 41: 1359
Building surfaces from borders in Areas 17 and 18 of the cat 41: 1389
The lateral occipital complex and its role in object recognition 41: 1409
Integrating electrophysiology and neuroimaging of spatial selective attention to simple isolated visual stimuli 41: 1423
Putting spatial attention on the map: timing and localization of stimulus selection processes in striate and extrastriate visual areas 41: 1437
Sustained extrastriate cortical activation without visual awareness revealed by fMRI studies of hemianopic patients 41: 1459

Brain activity evoked by inverted and imagined biological motion 41: 1475
Refractive state and accommodation in the eyes of free-swimming *versus* restrained juvenile lemon sharks *(Negaprion brevirostris)* 41: 1885
Reaction time in automated kinetic perimetry: effects of stimulus luminance, eccentricity, and movement direction 41: 2157
The influence of HEPES on light responses of rabbit horizontal cells 41: 2165
Evaluation of different recording parameters to establish a standard for flash electroretinography in rodents 41: 2173
Bubbles: a technique to reveal the use of information in recognition tasks 41: 2261
Sensitive calibration and measurement procedures based on the amplification principle in motion perception 41: 2355

TEMPORAL DISCRIMINATION
Dynamics of contour integration 41: 1023
Shine-through: temporal aspects 41: 2337
Linear mechanisms can produce motion sharpening 41: 2771

TEMPORAL FREQUENCY
Red-green and blue-yellow mechanisms are matched in sensitivity for temporal and spatial modulation 41: 245
Comparing increment and decrement probes in the probed-sinewave paradigm 41: 1119
The stereoscopic (cyclopean) motion aftereffect is dependent upon the temporal frequency of adapting motion 41: 1809
Temporal resolution of orientation-based texture segregation 41: 2089

TEXTURE PERCEPTION
Discrimination of an orientation difference in dynamic textures 41: 275
Orientation integration in detection and discrimination of contrast-modulated patterns 41: 295
Sensitivity to contrast histogram differences in synthetic wavelet-textures 41: 585
Texture space 41: 745
Information limitations in perception of shape from texture 41: 1519
Temporal resolution of orientation-based texture segregation 41: 2089
Filling-in the details on perceptual fading 41: 2107
Sensitivity to modulation of color distribution in multicolored textures 41: 2475
Visual aftereffects of sequential perception: dynamic adaptation to changes in texture density and contrast 41: 2607
Texture contrast aftereffects are monocular; texture density aftereffects are binocular 41: 2619
Information limitations in perception of shape from texture 41: 2925 (publisher's note), 41: 2927 (erratum)
Texture fading correlates with stimulus salience 41: 2969
Discriminating contrast discontinuities: asymmetries, dipper functions, and perceptual learning 41: 3009
Discriminating of isotrigon textures 41: 3837
Attention-dependent brief adaptation to contour orientation: a high-level aftereffect for convexity? 41: 3883

THRESHOLD. *see* CONTRAST SENSITIVITY; DETECTION THRESHOLD; INCREMENT THRESHOLD

TRANSPARENCY
Measurement of corneal sublayer thickness and transparency in transgenic mice with altered corneal clarity using in vivo confocal microscopy 41: 1283
Spatial scale of motion segmentation from speed cues 41: 2697

TRICHROMACY
Study of colour discrimination with comb-filtered spectra 41: 541

VELOCITY. *see* MOTION PERCEPTION, SPEED SENSITIVITY

VERGENCE. *see* EYE-MOVEMENTS, VERGENCE

VERNIER ACUITY. *see* HYPERACUITY

VISUAL AWARENESS
Sustained extrastriate cortical activation without visual awareness revealed by fMRI studies of hemianopic patients 41: 1459
Evidence from a line bisection task for visuospatial neglect in Left Hemiparkinson's disease 41: 2677
Colour, form, and movement are not perceived simultaneously 41: 2909

VISUAL FIELD
Multifocal pupillary light response fields in normal subjects and patients with visual field defects 41: 1073
The paracentral visual field in multiple sclerosis: evidence for a deficit in interneuronal spatial summation? 41: 1735
Perceived length in the central visual field: evidence for visual field asymmetries 41: 2119
Reaction time in automated kinetic perimetry: effects of stimulus luminance, eccentricity, and movement direction 41: 2157

VISUAL FIELD, FILLING-IN
Filling-in at the natural blind spot contributes to binocular rivalry 41: 835
Target/surround asymmetry in perceptual filling-in 41: 2065
Filling-in the details on perceptual fading 41: 2107
Different effects of lorazepam and diazepam on perceptual integration 41: 2297
Two competing mechanisms underlying neon color spreading, visual phantoms and grating induction 41: 2347
Surface color from boundaries: a new 'watercolor' illusion 41: 2669
Filling-in of the foveal blue scotoma 41: 2961
Texture fading correlates with stimulus salience 41: 2969

Darkness filling-in: a neural model of darkness induction 41: 3649

VISUAL FIELD, SUPPRESSION
Measurement and modeling of center-surround suppression and enhancement 41: 571
Conditions of perceptual selection and suppression during interocular rivalry in strabismic and normal cats 41: 771
Clinical suppression in monkeys reared with abnormal binocular visual experience 41: 1593

VISUAL MOTOR
Compression of space in visual memory 41: 329
Experience-dependent visual cue integration based on consistencies between visual and haptic percepts 41: 449
Ocular dominance reverses as a function of horizontal gaze angle 41: 1743
Saccades guided by somatosensory stimuli 41: 2407

VISUAL SEARCH
Saccade target selection in visual search: the effect of information from the previous fixation 41: 87
Uncertainty, attentional capacity and chromatic mechanisms in visual search 41: 313
Short-term priming, concurrent processing, and saccade curvature during a target selection task in the monkey 41: 785
On the psychophysics of the shape triangle 41: 1153
Effect of stimulus contrast on performance and eye movements in visual search 41: 1817
Size-based selection in rapid serial visual presentation 41: 2221
Peripheral and parafoveal cueing and masking effects on saccadic selectivity in a gaze-contingent window paradigm 41: 2757
Discriminating contrast discontinuities: asymmetries, dipper functions, and perceptual learning 41: 3009
Visual search in migraine and visual discomfort groups 41: 3063
Visual search in depth 41: 3487
Eye movements during visual search: the costs of choosing the optimal path 41: 3613
Eye movements and familiarity effects in visual search 41: 3763
Set-size and chromatic uncertainty in an accuracy visual search task 41: 3817

Authors did you know...

- Your article published with Elsevier Science is also included in ScienceDirect, the world's largest scientific network, reaching over 9 million scientists and researchers at **www.sciencedirect.com.**

- If your institute or organisation currently subscribes to ScienceDirect, you now have access to the full text of those journals in your subscription package at your desktop.

- ScienceDirect allows you to keep track of citations to your article via e-mail. You can set up a personal profile to ensure you are kept up-to-date with publications in your specialist areas of research.

- The publication of your article is announced in advance to thousands of registrants to our FREE e-mail alerting service **ContentsDirect**. Find out more by accessing **www.elsevier.com/locate/contentsdirect**

- Your article will be available in the ScienceDirect electronic archive and as such accessible to the millions of scientists visiting our database for an unlimited period of time.

ScienceDirect provides the articles **you** need for **your** research – **www.sciencedirect.com**

SCIENCE DIRECT® SCIENCE DIRECT® WEB editions

AUTHORS

If you want to make the best of your artwork send it in the correct digital format

All articles accepted for publication in Elsevier Science journals are processed using electronic production methods. Authors should therefore ensure that their artwork conforms to the following guidelines:

- **Colour and greyscale images** should be supplied as **TIFF** or **EPS** files (resolution 300 dpi).
- **Line drawings (black & white or colour)** should be supplied as **EPS** files

If you need help to create files in these formats, go to ***www.elsevier.com/locate/authorartwork/formats***

Please also note:

- We still need a good quality hard copy of each figure in case the electronic file cannot be used. The hard copy and electronic file must match exactly.
- We can use floppy disks, ZIP disks or CD-ROM. Artwork files should be on a separate disk or CD to article text files.
  www.elsevier.com/locate/authorartwork/media
- Only standard fonts should be used, for example:
  Times, Times New Roman, Helvetica, Arial, Symbol
  www.elsevier.com/locate/authorartwork/formats
- Lines should be a minimum width of 0.5 pt.
  www.elsevier.com/locate/authorartwork/linewidth
- Only standard colours should be used.
  www.elsevier.com/locate/authorartwork/colours
- Lettering should be a consistent size and appropriate to the size of the figure.
  www.elsevier.com/locate/authorartwork/sizing
- An image which looks acceptable on a computer may not reproduce well, so it is important to ensure that these guidelines are followed.

Our Author Artwork website has all the information you need on how to submit your artwork correctly. Visit it today at:

www.elsevier.com/locate/authorartwork

ELSEVIER | NORTH HOLLAND | PERGAMON

VISION RESEARCH

INSTRUCTIONS TO AUTHORS

General

Five double-spaced typewritten copies of the manuscript and illustrations are required. The original plus three copies must be submitted to the central office, preferably by airmail:

Vision Research
P.O. Box 12011
1100 AA Amsterdam
The Netherlands

and one copy to one of the Section Editors whose subject area most closely relates to the work submitted. This holds for full papers as well as for Rapid Communications. (Please indicate to the central office which Section Editor you have selected; every sixth issue of *Vision Research* contains a full description of the scope of each section). To speed up the reviewing process, the title and abstract of your manuscript should be Emailed simultaneously to the Section Editor of your choice. Should you prefer to send your manuscript by express *courier*, please use the address: Vision Research, Prof. H. Spekreijse, AMC L0-051, Meibergdreef 15, 1105 AZ Amsterdam, The Netherlands.

Authors are urged to be as concise as their material will allow, both in text and in illustrations and to take particular care to ensure that the paper is in final form once submitted. Papers of monograph length will not be considered, nor will a series of numbered papers. *Rapid communications* should not exceed a length of about 2000 words.

All manuscripts should be accompanied by a clear statement that the work has not been published elsewhere and is not under review with another journal, and that if published in *Vision Research* it will not be reprinted elsewhere in any language in the same form without the consent of the publisher, who holds the copyright. Authors should keep copies of all material submitted. Manuscripts will not be returned, and top copies of the artwork will be returned only if this is specifically indicated.

All authors must sign the 'Transfer of Copyright' agreement before the article can be published. This transfer agreement enables Elsevier Science Ltd to protect the copyrighted material for the authors, but does not relinquish the author's proprietary rights. The copyright transfer covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform or any other reproductions of similar nature and translations, and includes the right to adapt the article for use in conjunction with computer systems and programs, including reproduction or publication in machine-readable form and incorporation in retrieval systems. Authors are responsible for obtaining from the copyright holder permission to reproduce any figures for which copyright exists.

Full papers and Rapid Communications will be judged by two qualified reviewers, unless a manuscript has been rejected up front. Rejection up front may occur when a section editor has serious doubt whether a paper will pass the reviewing procedure (outside scope of VR etc). In that case the chairman is consulted and if both agree, the central office will notify the author. If in response to a published article a letter to the Editor is received, this letter will be sent out for review and at the same time be forwarded to the author(s) tackled. If the letter is accepted, the author(s) of the initial paper will be invited to write a reply within a short period of time, and the reviewers of the letter will be asked to review the reply. Authors volunteering to prepare *Minireviews* are invited to submit proposals to the appropriate Section Editor including the following information: (1) title, (2) justification for a Minireview at this time on the topic selected, (3) a rough outline and (4) a **firm** date for submission of the completed work, should the Section Editor accept the proposal. *Vision Research* has a restrictive *Obituary* policy. Obituaries should be submitted to the appropriate Section Editor and the Chairman, and should not exceed a length of one printed page including photograph.

Specific

1. Papers should be written in the English language, accompanied by an abstract. The title page should include up to five key words selected from the key word list published bi-annually in the first and thirteenth issues of *Vision Research*. If a key word which does not appear in the list is needed, it should be underlined. Animal classification should also be given to serve as a guideline for abstracting and indexing.
2. The abstract must be no longer than 100 words and should supplement the title informing the reader of the essential points of the paper.
3. Authors are encouraged to use 95% confidence limits. For purely descriptive studies, rather than those which aim to compare means, the standard deviation is an appropriate measure.
4. The manuscript should be single-sided, double-spaced *typewritten* with generous margins. All materials will be discarded **one month** after publication, unless the publisher is requested to return original material to the author.

5. Rejected manuscripts and figures will not be returned to authors, unless specifically required. Rejected manuscripts will not be reconsidered for publication, so they cannot be resubmitted as a revision. Submission as a new paper is possible if manuscript and experiments have been extended substantially.
6. Authors should return a revised manuscript within 6 months, otherwise it will be treated as a new submission. All material will be discarded after 1 year.
7. *Electronic Manuscripts*

   Authors are encouraged to submit a computer disk (3.5″ HD/DD disk) containing the *final* version of the paper along with the *final* manuscript to the Editorial office. Please observe the following criteria:

   (a) Send only hard copy when first submitting your paper.
   (b) When your paper has been referred, revised if necessary and accepted, send a disk containing the final version with the final hard copy. **It is essential that the printed version supplied is produced directly from the electronic version**. In the event of differences between disk and hard copy, the hard copy will be considered to be definitive.
   (c) Specify what software was used, including which release (e.g. WordPerfect 4.0).
   (d) Specify what computer was used (either IBM compatible PC or Apple Macintosh).
   (e) Include the text file and separate table and illustration files, if available.
   (f) The file should follow the general instruction on style/arrangement and, in particular, the reference style of this journal as given in item (10).
   (g) The file should be single and should use the wrap-around end-of-line feature (i.e. no returns at the end of each line). Use hard returns (i.e. the enter key) only at the end of paragraphs. Page design will be handled by the publisher. There is no need therefore to use formatting commands such as centring, justifying text, indenting etc. Use the word processor's facilities to indicate the follwing text attributes: bold, underline, italic, superscript, subscript, strikeout. When using symbols to denote special characters please supply a list of all codes used. Do not use the hyphenation facilities available on the word processor. Authors should not use their own macros. When preparing tables, tabs should be used, not spaces, to align columns.
   (h) Authors wishing to submit their articles as a Latex/tex file can obtain the Elsevier LaTeX package (including detailed instructions for LaTeX preparation) from Elsevier's web site: www.elsevier.com/locate/latex. Alternatively, authors can email Author Services using authors@elsevier.co.uk for assistance.
   (i) Keep a back-up disk for reference and safety.
8. Reprints can be provided at a reasonable cost if ordered when the page proofs are returned. A reprint order form will accompany the proofs. Copies of the particular issue in which the article appears may also be ordered on this form, at a generous discount offer.
9. **Corrections to the proofs must be restricted to printer's errors**. Other than these, any substantial changes will be charged to the author.
10. When human subjects are used, manuscripts must be accompanied by a statement that the experiments were undertaken with the understanding and written consent of each subject. Authors should be aware of the Code of Ethics of the World Medical Association (Declaration of Helsinki), which has been printed in the *British Medical Journal* (18 July 1964). When experimental animals are used, the methods section must clearly indicate that adequate measures were taken to minimize pain or discomfort. Experiments should be carried out in accordance with the European Communities Council Directive of 24 November 1986 (86/609/EEC) or with the Guidelines laid down by the NIH in the US regarding the care and use of animals for experimental procedures. Editors reserve the right to reject papers if there is doubt whether appropriate procedures have been used.
11. *References*

   (a) These should be cited in the text by giving the last name of the author (or authors) followed by the year of publication in parentheses, e.g. Gray (1998), Gray and Regan (1998) or (Gray & Regan, 1998). If there are three or more authors, citations should read Brandstätter, Koulen, and Wässle (1997), first citation; Brandstätter et al. (1997), second citation. If there is more than one work by an author (or authors) in a given year, then they should be labelled alphabetically within each year (e.g. Gray, 1998a,b).
   (b) The full references should be typed on a separate page and placed at the end of the article. They should not be given as footnotes. References should include the names of all the authors and their initials, the year of publication, the full title of the article or book, name of the journal, the volume number and the pages. For books, the city of publication and the publisher should be given. The following may serve as illustrations:

   Gray, R., & Regan, D. (1998). Spatial frequency discrimination and detection characteristics for gratings defined by orientation texture. *Vision Research*, *38*, 2601–2617.

   Brandstätter, J. H., Koulen, P., & Wässle, H. (1997). Kainate receptors in the rat retina. *Investigative Ophthalmology and Visual Science*, *38* (Suppl.), 689 (Abstract).

   Kamermans, M., & Spekreijse, H. (1995). Spectral behaviour of cone-driven horizontal cells in teleost retina. In N. N. Osborne, & G. J. Chader. *Progress in retinal and eye research* (pp. 313–360). Oxford: Pergamon Press.

   (c) Unpublished work, work in press or conference proceedings should be cited only exceptionally, and preprints must accompany the paper if they are essential to its argument.
12. *Illustrations and Tables*

   (a) Only standard size (*ca* $8\frac{1}{2} \times 12$ in.) should be sent with the paper. They should not be affixed in place, but the proper places for insertion should be indicated in the text. All photographs, graphs and diagrams should be referred to as "Figures" and should be numbered consecutively, as should the tables. The legends should be typed, correspondingly, on a separate sheet at the end of the article. The author's name, the number, and an indication of the proper orientation should be written lightly on the back of each figure or table.
   (b) Halftone illustrations (e.g. micrographs) should be glossy prints and should be approximately 1.5 times the final size. In general, it is preferable that any lines or letters that are to appear on the photographs be inserted by the publisher. Their position should be drawn on a leaf of drawing paper firmly attached to the photograph, or on an additional print. Where possible, the author should include a guide to the Production Department which will help them identify the salient features to be reproduced.
   (c) Line drawings should be drawn on stiff white paper or tracing cloth, high quality computer graphics are acceptable. They should be approximately twice their final size. The letters and symbols should be drawn so that they will be clearly legible when reduced. The following standard symbols are readily available to the publisher. ○ △ □ ● ▲ ■ + ×. Other special symbols (e.g. Greek letters) should be made legible and explicit.
